Stalin's Police Nov 08 2021 Stalin's Police offers a new interpretation of the mass repressions associated with the Stalinist terror of the late 1930s. This pioneering study traces the development of professional policing from its pre-revolutionary origins through the late 1930s and early 1940s. Paul Hagenloh argues that the policing methods employed in the late 1930s were the culmination of a set of ideologically driven policies dating back to the previous decade. Hagenloh's vivid and monumental account is the first to show how Stalin's peculiar brand of policing—in which criminals, juvenile delinquents, and other marginalized population groups were seen increasingly as threats to the political and social order—supplied the core mechanism of the Great Terror.

The Investigative Enterprise Dec 21 2022 The seven distinguished contributors to this volume illuminate not only the history of the biological and medical sciences but also the relationship between institutes and ideas which characterized the explosion of scientific investigation, especially in Germany. Besides William Coleman and Frederic L. Holmes, they include Robert G. Frank, Jr., Timothy Lenoir, John E. Lesch, Kathryn M. Olesko, and Arlene M. Tuchman. Scientific investigation was not new to the nineteenth century, but it was during that period that it began to be carried out on a scale large enough to become crucial to the welfare of nations. Much remains to be learned about how the forms of organization characteristic of the modern investigative enterprise originated. This book explores such questions in relation to one of the dominant experimental sciences of the century, physiology. Each author shows, through the examination of a specific institute or a specific subject, that the interplay between research, pedagogy, personal vision, and state or public interests can be studied to particular advantage in localized settings. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1988.

Parapsychology: Frontier Science of the Mind Apr 01 2021 Master magician Harry Houdini and English ghost researcher Harry Price were true pioneers in both establishing skepticism and scientific methods in the newly created field of paranormal research. They set the foundation for future 20th Century researchers such as J.B. Rhine. Joseph Banks Rhine was a botanist who later developed an interest in parapsychology and psychology. Rhine founded the parapsychology lab at Duke University, the Journal of Parapsychology, and the Foundation for Research on the Nature of Man. He also initiated the Parapsychological Association. Rhine also coined the term ESP. I think the reader will find that 1957's Parapsychology: Frontier Science of the Mind is as relevant today as it was when it first written.

Phenomena Sep 18 2022 The definitive history of the military's decades-long investigation into mental powers and phenomena, from the author of Pulitzer Prize finalist *The Pentagon's Brain* and international bestseller *Area 51*. This is a book about a team of scientists and psychics with top secret clearances. For more than forty years, the U.S. government has researched extrasensory perception, using it in attempts to locate hostages, fugitives, secret bases, and downed fighter jets, to divine other nations' secrets, and even to predict future threats to national security. The intelligence agencies and military services involved include CIA, DIA, NSA, DEA, the Navy, Air Force, and Army-and even the Joint Chiefs of Staff. Now, for the first time, New York Times bestselling author Annie Jacobsen tells the story of these radical, controversial programs, using never before seen declassified documents as well as exclusive interviews with, and unprecedented access to, more than fifty of the individuals involved. Speaking on the record, many for the first time, are former CIA and Defense Department scientists, analysts, and program managers, as well as the government psychics themselves. Who did the U.S. government hire for these top secret programs, and how do they explain their military and intelligence work? How do scientists approach such enigmatic subject matter? What interested the government in these supposed powers and does the research continue? *Phenomena* is a riveting investigation into how far governments will go in the name of national security.

Failing Law Schools Feb 28 2021 On the surface, law schools today are thriving. Enrollments are on the rise, and their resources are often the envy of every other university department. Law professors are among the highest paid and play key roles as public intellectuals, advisers, and government officials. Yet behind the flourishing facade, law schools are failing abjectly. Recent front-page stories have detailed widespread dubious practices, including false reporting of LSAT and GPA scores, misleading placement reports, and the fundamental failure to prepare graduates to enter the profession. Addressing all these problems and more in a ringing critique is renowned legal scholar Brian Z. Tamanaha. Piece by piece, Tamanaha lays out the how and why of the crisis and the likely consequences if the current trend continues. The out-of-pocket cost of obtaining a law degree at many schools now approaches \$200,000. The average law school graduate's debt is around \$100,000—the highest it has ever been—while the legal job market is the worst in

decades, with the scarce jobs offering starting salaries well below what is needed to handle such a debt load. At the heart of the problem, Tamanaha argues, are the economic demands and competitive pressures on law schools—driven by competition over U.S. News and World Report ranking. When paired with a lack of regulatory oversight, the work environment of professors, the limited information available to prospective students, and loan-based tuition financing, the result is a system that is fundamentally unsustainable. Growing concern with the crisis in legal education has led to high-profile coverage in the Wall Street Journal and the New York Times, and many observers expect it soon will be the focus of congressional scrutiny. Bringing to the table his years of experience from within the legal academy, Tamanaha has provided the perfect resource for assessing what's wrong with law schools and figuring out how to fix them.

The Making of Modern Portugal Feb 17 2020 This book can be read in two different ways: as an introductory synthesis on Modern Portugal, or as a collection of twelve studies focusing on familiar aspects of the State formation of any modern nation throughout the nineteenth and twentieth centuries. In this second reading, each chapter opens comparative perspectives on specific topics within some key fields of studies and international debates on modernity, including population, police, empire, technology, bureaucracy, social sciences, rural life, education, religion, nationalism, communism, and economy. Such a wide range of subjects, however, proves comprehensive enough to create a narrative where the reader may also locate the chief trends and dynamics developing in Portuguese history and society during the last two centuries. From this perspective, Portugal emerges as a country traversed by social conflict and struggling for modernization. Granted, this is not a very surprising picture, especially if we consider it in the historical context of European modernity. And yet, it is precisely this familiarity, one might argue, that allows *The Making of Modern Portugal* to become a useful tool for inserting the Portuguese case into the debates of a wide range of fields and disciplines in Europe and beyond.

Science Confronts the Paranormal Jul 16 2022 A Gallop poll surveyed 506 American teenagers, aged 13 to 18 and discovered the following: - 69% believe in angels - 59% believe in ESP - 55% believe in astrology - 28% believe in clairvoyance - 24% believe in Bigfoot - 22% believe in witchcraft - 20% believe in ghosts - 18% believe in the Loch Ness Monster Carl Sagan has said that the wonders of real science far surpass the supposed and imagined mysteries of fringe science. Yet, as statistics show, the paranormal is still an endless source of fascination for people around the world. This collection of critical essays and investigative reports examines virtually every area of fringe science and the paranormal from a refreshingly scientific and clear-minded viewpoint. The authors are noted scientists, philosophers, psychologists, and writers. All bring to the task a determination to sift sense from nonsense and fact from fiction in an area notorious for misinformation, misperception, self-delusion, and wishful thinking. They do so in a way that highlights the differences between real science and pseudoscience. They've made special efforts first to find the actual facts behind numerous claims that have popular appeal, and then to explain and communicate what scientific investigation and reasoning reveal about them. Subjects treated to incisive and entertaining examination include astrology, ESP, psychic detectives, psychic predictions, parapsychology, remote-viewing, UFOs, creationism, the Shroud of Turin, coincidences, cult archaeology, palmistry and fringe medicine. There are also explorations of the implications of paranormal beliefs for science education.

Science Whispering Spirit Oct 15 2019 Something extraordinary is going on. Science is finding that much of the paranormal is really normal. But even though research is uncovering the truth of psychic phenomena, psychics rarely win lottery jackpots. Why is that? Evidence increasingly indicates that our consciousness survives physical death, but few people converse with loved ones who have passed away. Why is that? The statistical probability that our universe exists at all is remote, yet the scientific paradigm is reluctant to allow that it might be designed. Why is that? And repeatedly, fewer people are involved in cataclysmic tragedies than the odds would expect for the time and location. Yet most of us do not recognize intuitive hints to avoid serious misfortune. Why is that? For centuries, science dismissed much paranormal weirdness as coincidence without seriously looking at it. It is now discovering that we are experiencing more than coincidence. But much remains hidden, intuition is rarely obvious, and psychic errors abound. Why? Why indeed? Hop aboard to explore some answers.

Global Debt Database: Methodology and Sources Nov 27 2020 This paper describes the compilation of the Global Debt Database (GDD), a cutting-edge dataset covering private and public debt for virtually the entire world (190 countries) dating back to the 1950s. The GDD is the result of a multiyear investigative process that started with the October 2016 Fiscal Monitor, which pioneered the expansion of private debt series to a global sample. It differs from existing datasets in three major ways. First, it takes a fundamentally new approach to compiling historical data. Where most debt datasets either provide long series with a narrow and changing definition of debt or comprehensive debt concepts over a short period, the GDD adopts a multidimensional approach by offering multiple debt series with different coverages, thus ensuring consistency across time. Second, it more than doubles the cross-sectional dimension of existing private debt datasets. Finally, the integrity of the data has been checked through bilateral consultations with officials and IMF country desks of all countries in the sample, setting a higher data quality standard.

Counter-terrorism, Constitutionalism and Miscarriages of Justice Jan 18 2020 The purpose of this book is to honour the influential and wide-ranging work of Professor Clive Walker. It explores Professor Walker's influence from three perspectives. Firstly, it provides a historical reflection upon the development of the law and policy in relation to counter-terrorism and miscarriages of justice since the 1970s. This historical perspective, which is often overlooked, is particularly timely 17 years after 9/11 as trends become clearer and historical perspective even more valuable. So too with miscarriages of justice: while there was considerable public and political scrutiny following high-profile miscarriages such as the Birmingham Six, Guildford Four, and others, in the early 1990s, today there is much less scrutiny, despite significant concern relating to issues such as legal aid and access to justice increasing the potential (if not likelihood) for miscarriages to occur. By including a critical historical perspective, this book enables us to learn lessons from the past and to minimise contemporary risks of miscarriages of justice. Secondly, this book provides a critical analysis of the law and policy as it stands today, and its future trajectory. Applying Walker's theoretical and analytical contributions to the field, the authors focus on pressing contemporary concerns, identifying lacunae where relevant, as well as the possible, probable and preferable future trends. Finally, the book celebrates and recognises the significant contributions by Walker, with each chapter built around one or more of Walker's key works.

Adenauer's Germany and the Nazi Past Jun 03 2021 Of all the aspects of recovery in postwar Germany perhaps none was as critical or as complicated as the matter of dealing with Nazi criminals, and, more broadly, with the Nazi past. While on the international stage German officials spoke with contrition of their nation's burden of guilt, at home questions of responsibility and retribution were not so clear. In this masterful examination of Germany under Adenauer, Norbert Frei shows that, beginning in 1949, the West German government dramatically reversed the denazification policies of the immediate postwar period and initiated a new "Vergangenheitspolitik," or "policy for the past," which has had enormous

consequences reaching into the present. Adenauer's Germany and the Nazi Past chronicles how amnesty laws for Nazi officials were passed unanimously and civil servants who had been dismissed in 1945 were reinstated liberally—and how a massive popular outcry led to the release of war criminals who had been condemned by the Allies. These measures and movements represented more than just the rehabilitation of particular individuals. Frei argues that the amnesty process delegitimized the previous political expurgation administered by the Allies and, on a deeper level, served to satisfy the collective psychic needs of a society longing for a clean break with the unparalleled political and moral catastrophe it had undergone in the 1940s. Thus the era of Adenauer devolved into a scandal-ridden period of reintegration at any cost. Frei's work brilliantly and chillingly explores how the collective will of the German people, expressed through mass allegiance to new consensus-oriented democratic parties, cast off responsibility for the horrors of the war and Holocaust, effectively silencing engagement with the enormities of the Nazi past.

The Men Who Stare at Goats Apr 13 2022 Bizarre military history: In 1979, a crack commando unit was established by the most gifted minds within the U.S. Army. Defying all known laws of physics and accepted military practice, they believed that a soldier could adopt the cloak of invisibility, pass cleanly through walls, and—perhaps most chillingly—kill goats just by staring at them. They were the First Earth Battalion, entrusted with defending America from all known adversaries. And they really weren't joking. What's more, they're back—and they're fighting the War on Terror. An uproarious exploration of American military paranoia: With investigations ranging from the mysterious "Goat Lab," to Uri Geller's covert psychic work with the CIA, to the increasingly bizarre role played by a succession of U.S. presidents, this might just be the funniest, most unsettling book you will ever read—if only because it is all true and is still happening today.
