From Bad Grades to a Great Life! Aug 08 2021 Your underachiever can grow-up to have a great life How can I be so sure? Over the past three decades, thousands of parents and educators world-wide have discovered the power of Love and Logic. In this book, From Bad Grades to a Great Life, you'll learn why character and personal responsibility form the foundation of lasting academic and occupational achievement. In the process you'll also learn practical skills for: . Avoiding un-winnable power-struggles over homework and grades. Helping children discover and capitalize upon their natural strengths. Teaching politeness, respect and personal responsibility. Showing children that the key to happiness involves determination and hard work, rather than luck or handouts. Creating a happier family

The Logic of Violence in Civil War Oct 10 2021 By analytically decoupling war and violence, this book explores the causes and dynamics of violence in civil war. Against the prevailing view that such violence is an instance of impenetrable madness, the book demonstrates that there is logic to it and that it has much less to do with collective emotions, ideologies, and cultures than currently believed. Kalyvas specifies a novel theory of selective violence: it is jointly produced by political actors seeking information and individual civilians trying to avoid the worst but also grabbing what opportunities their predicament affords them. Violence, he finds, is never a simple reflection of the optimal strategy of its users; its profoundly interactive character defeats simple maximization logics while producing surprising outcomes, such as relative nonviolence in the 'frontlines' of civil war.

The Black Swan Oct 18 2019 The Black Swan is a standalone book in Nassim Nicholas Taleb's landmark Incerto series, an investigation of opacity, luck, uncertainty, probability, human error, risk, and decision-making in a world we don't understand. The other books in the series are Fooled by Randomness, Antifragile, and The Bed of Procrustes. A black swan is a highly improbable event with three principal characteristics: It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random, and more predictable, than it was. The astonishing success of Google was a black swan; so was 9/11. For Nassim Nicholas Taleb, black swans

underlie almost everything about our world, from the rise of religions to events in our own personal lives. Why do we not acknowledge the phenomenon of black swans until after they occur? Part of the answer, according to Taleb, is that humans are hardwired to learn specifics when they should be focused on generalities. We concentrate on things we already know and time and time again fail to take into consideration what we don't know. We are, therefore, unable to truly estimate opportunities, too vulnerable to the impulse to simplify, narrate, and categorize, and not open enough to rewarding those who can imagine the "impossible." For years, Taleb has studied how we fool ourselves into thinking we know more than we actually do. We restrict our thinking to the irrelevant and inconsequential, while large events continue to surprise us and shape our world. In this revelatory book, Taleb explains everything we know about what we don't know, and this second edition features a new philosophical and empirical essay, "On Robustness and Fragility," which offers tools to navigate and exploit a Black Swan world. Elegant, startling, and universal in its applications, *The Black Swan* will change the way you look at the world. Taleb is a vastly entertaining writer, with wit, irreverence, and unusual stories to tell. He has a polymathic command of subjects ranging from cognitive science to business to probability theory. *The Black Swan* is a landmark book—itsself a black swan. Praise for Nassim Nicholas Taleb "The most prophetic voice of all."—GQ Praise for *The Black Swan* "[A book] that altered modern thinking."—The Times (London) "A masterpiece."—Chris Anderson, editor in chief of *Wired*, author of *The Long Tail* "Idiosyncratically brilliant."—Niall Ferguson, *Los Angeles Times* "The Black Swan changed my view of how the world works."—Daniel Kahneman, Nobel laureate "[Taleb writes] in a style that owes as much to Stephen Colbert as it does to Michel de Montaigne. . . . We eagerly romp with him through the follies of confirmation bias [and] narrative fallacy."—The Wall Street Journal "Hugely enjoyable—compelling . . . easy to dip into."—Financial Times "Engaging . . . The Black Swan has appealing cheek and admirable ambition."—The New York Times Book Review From the Hardcover edition.

If A, Then B Nov 11 2021 Treats politics, economics, technology, and geography as fundamental factors in generating an audience for logic.

Logic of Moral Science Jun 25 2020 John Stuart Mill (1806–73) was the most influential English philosopher of the nineteenth century. His vast intellectual output covered a range of subjects — traditional philosophy and logic, economics, political science — and included this work, a founding document in the area now known as social science. In *The Logic of the Moral Sciences*, Mill applied his considerable talents to examining how the study of human behavior, society, and history could be established on a rational, philosophical basis. The philosopher maintains that casual empiricism and direct experiment are not applicable to the study of complex social phenomena. Instead, "empirical laws," drawn from historical generalizations, must be derivable from a deductive science of human nature. Mills' insights and approaches have remained relevant in the century and a half since this treatise's publication. This volume will prove of vital interest to historians of philosophy and the social sciences as well as to undergraduate social science majors.

Logic: The Basics Mar 03 2021 *Logic: The Basics* is an accessible introduction to several core areas of logic. The first part of the book features a self-contained introduction to the standard topics in classical logic, such as: · mathematical preliminaries · propositional logic · quantified logic (first monadic, then polyadic) · English and standard 'symbolic translations' · tableau procedures. Alongside comprehensive coverage of the standard topics, this thoroughly revised second edition also introduces several philosophically important nonclassical logics, free logics, and modal logics, and gives the reader an idea of how they can take their knowledge further. With its wealth of exercises (solutions available in the encyclopedic online supplement), *Logic: The Basics* is a useful textbook for courses ranging from the introductory level to the early graduate level, and also as a reference for students and researchers in

philosophical logic.

Beyond Consequences, Logic, and Control Dec 24 2022

Parenting with Love and Logic Sep 21 2022 Argues that children must learn to make their own decisions and accept the consequences, and shows parents ways to encourage responsibility while maintaining discipline.

Logic, Semantics, Metamathematics Mar 23 2020

Mysticism and Logic Dec 12 2021

Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products Aug 28 2020 Tobacco use by adolescents and young adults poses serious concerns. Nearly all adults who have ever smoked daily first tried a cigarette before 26 years of age. Current cigarette use among adults is highest among persons aged 21 to 25 years. The parts of the brain most responsible for cognitive and psychosocial maturity continue to develop and change through young adulthood, and adolescent brains are uniquely vulnerable to the effects of nicotine. At the request of the U.S. Food and Drug Administration, *Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products* considers the likely public health impact of raising the minimum age for purchasing tobacco products. The report reviews the existing literature on tobacco use patterns, developmental biology and psychology, health effects of tobacco use, and the current landscape regarding youth access laws, including minimum age laws and their enforcement. Based on this literature, the report makes conclusions about the likely effect of raising the minimum age to 19, 21, and 25 years on tobacco use initiation. The report also quantifies the accompanying public health outcomes based on findings from two tobacco use simulation models. According to the report, raising the minimum age of legal access to tobacco products, particularly to ages 21 and 25, will lead to substantial reductions in tobacco use, improve the health of Americans across the lifespan, and save lives. *Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products* will be a valuable reference for federal policy makers and state and local health departments and legislators.

An Illustrated Book of Bad Arguments May 05 2021 “A flawless compendium of flaws.” —Alice Roberts, PhD, anatomist, writer, and presenter of *The Incredible Human Journey* The antidote to fuzzy thinking, with furry animals! Have you read (or stumbled into) one too many irrational online debates? Ali Almosawi certainly had, so he wrote *An Illustrated Book of Bad Arguments*! This handy guide is here to bring the internet age a much-needed dose of old-school logic (really old-school, à la Aristotle). Here are cogent explanations of the straw man fallacy, the slippery slope argument, the ad hominem attack, and other common attempts at reasoning that actually fall short—plus a beautifully drawn menagerie of animals who (adorably) commit every logical faux pas. Rabbit thinks a strange light in the sky must be a UFO because no one can prove otherwise (the appeal to ignorance). And Lion doesn't believe that gas emissions harm the planet because, if that were true, he wouldn't like the result (the argument from consequences). Once you learn to recognize these abuses of reason, they start to crop up everywhere from congressional debate to YouTube comments—which makes this geek-chic book a must for anyone in the habit of holding opinions.

The Science of Logic Sep 28 2020

Rationality and Logic Aug 20 2022 An argument that logic is intrinsically psychological and human psychology is intrinsically logical, and that the connection between human rationality and logic is both constitutive and mutual. In *Rationality and Logic*, Robert Hanna argues that logic is intrinsically psychological and that human psychology is intrinsically logical. He claims that logic is cognitively constructed by rational animals (including humans) and that rational animals are essentially logical animals. In order to do so, he defends the broadly Kantian thesis that all (and only) rational animals possess an innate cognitive "logic faculty." Hanna's claims challenge the conventional philosophical

wisdom that sees logic as a fully formal or "topic-neutral" science irreconcilably separate from the species- or individual-specific focus of empirical psychology. Logic and psychology went their separate ways after attacks by Frege and Husserl on logical psychologism—the explanatory reduction of logic to empirical psychology. Hanna argues, however, that—despite the fact that logical psychologism is false—there is an essential link between logic and psychology. Rational human animals constitute the basic class of cognizers or thinkers studied by cognitive psychology; given the connection between rationality and logic that Hanna claims, it follows that the nature of logic is significantly revealed to us by cognitive psychology. Hanna's proposed "logical cognitivism" has two important consequences: the recognition by logically oriented philosophers that psychologists are their colleagues in the metadiscipline of cognitive science; and radical changes in cognitive science itself. Cognitive science, Hanna argues, is not at bottom a natural science; it is both an objective or truth-oriented science and a normative human science, as is logic itself.

The Semantic Conception of Logic Oct 22 2022 This collection of new essays presents cutting-edge research on the semantic conception of logic, the invariance criteria of logicity, grammaticality, and logical truth. Contributors explore the history of the semantic tradition, starting with Tarski, and its historical applications, while central criticisms of the tradition, and especially the use of invariance criteria to explain logicity, are revisited by the original participants in that debate. Other essays discuss more recent criticism of the approach, and researchers from mathematics and linguistics weigh in on the role of the semantic tradition in their disciplines. This book will be invaluable to philosophers and logicians alike.

The Blackwell Guide to Philosophical Logic May 25 2020 This volume presents a definitive introduction to twenty core areas of philosophical logic including classical logic, modal logic, alternative logics and close examinations of key logical concepts.

Innovation and Scaling for Impact Apr 04 2021 Innovation and Scaling for Impact forces us to reassess how social sector organizations create value. Drawing on a decade of research, Christian Seelos and Johanna Mair transcend widely held misconceptions, getting to the core of what a sound impact strategy entails in the nonprofit world. They reveal an overlooked nexus between investments that might not pan out (innovation) and expansion based on existing strengths (scaling). In the process, it becomes clear that managing this tension is a difficult balancing act that fundamentally defines an organization and its impact. The authors examine innovation pathologies that can derail organizations by thwarting their efforts to juggle these imperatives. Then, through four rich case studies, they detail innovation archetypes that effectively sidestep these pathologies and blend innovation with scaling. Readers will come away with conceptual models to drive progress in the social sector and tools for defining the future of their organizations.

Teaching with Love & Logic May 17 2022 Presents techniques for teaching based on the "Love and Logic" philosophy of working with children.

Thinking, Fast and Slow Feb 20 2020 Major New York Times bestseller Winner of the National Academy of Sciences Best Book Award in 2012 Selected by the New York Times Book Review as one of the ten best books of 2011 A Globe and Mail Best Books of the Year 2011 Title One of The Economist's 2011 Books of the Year One of The Wall Street Journal's Best Nonfiction Books of the Year 2011 2013 Presidential Medal of Freedom Recipient Kahneman's work with Amos Tversky is the subject of Michael Lewis's The Undoing Project: A Friendship That Changed Our Minds In the international bestseller, Thinking, Fast and Slow, Daniel Kahneman, the renowned psychologist and winner of the Nobel Prize in Economics, takes us on a groundbreaking tour of the mind and explains the two systems that drive the way we think. System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the

difficulties of predicting what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these can be understood only by knowing how the two systems shape our judgments and decisions. Engaging the reader in a lively conversation about how we think, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our business and our personal lives—and how we can use different techniques to guard against the mental glitches that often get us into trouble. Winner of the National Academy of Sciences Best Book Award and the Los Angeles Times Book Prize and selected by The New York Times Book Review as one of the ten best books of 2011, *Thinking, Fast and Slow* is destined to be a classic.

Beyond Consequences, Logic, and Control Jan 25 2023 Covers in detail the effects of trauma on the body-mind and how trauma alters children's behavioral responses.

Constitutionalizing World Politics Feb 02 2021 Constitutionalization of world politics is emerging as an unintended consequence of international treaty making driven by the logic of democratic power. The analysis will appeal to scholars of International Relations and International Law interested in international cooperation, as well as institutional and constitutional theory and practice.

The Concept of Logical Consequence Jul 07 2021 The Concept of Logical Consequence is a critical evaluation of the model-theoretic and proof-theoretic characterizations of logical consequence that proceeds from Alfred Tarski's characterization of the informal concept of logical consequence. This study evaluates and expands upon ideas set forth in Tarski's 1936 article on logical consequence, and appeals to his 1935 article on truth. Classical logic, as well as extensions and deviations are considered. Issues in the philosophy of logic such as the nature of logical constants, the philosophical significance of completeness, and the metaphysical and epistemological implications of logic are discussed in the context of the examination of the concept of logical consequence.

Beginning Model Theory Jul 19 2022

Parenting with Love and Logic Nov 23 2022 Over 900,000 copies sold! Who uses love and logic in their parenting? Parents, counselors, and teachers around the globe—even Bill and Melinda Gates have found the philosophy of Parenting with Love and Logic an important guide when raising their three children. Learn how to reel in your own emotions while teaching your children responsibility, establishing boundaries, and growing their character. Establish healthy control through easy-to-implement steps without anger, threats, nagging, or power struggles. Trusted by generations of parents, counselors, and teachers to lovingly raise responsible children, Parenting with Love and Logic includes solutions for dozens of specific topics like tantrums, managing screen time, and getting ready for school, all indexed for easy reference. Updated to help parents make important family decisions about the use of technology, including mobile phones and social media.

Parenting Teens with Love & Logic Mar 15 2022 Even those who wait at home are eager to hear all about kindergarten. The animals are in a tizzy; Tommy is missing. The dog says Tommy is gone to a place called kindergarten. ?Where is kindergarten? they exclaim. ?What will happen to Tommy there? Will he ever come back?!? Eventually Tommy bursts into the barn with tales of all he learned in kindergarten. A charming and tender story that's sure to reassure any child heading to kindergarten.

Treatise on Consequences Jan 01 2021 The rediscovery of Aristotle in the late twelfth century led to a fresh development of logical theory, culminating in Buridan's crucial comprehensive treatment in the *Treatise on Consequences*. Buridan's novel treatment of the categorical syllogism laid the basis for the study of logic in succeeding centuries. This new translation offers a clear and accurate rendering of Buridan's text. It is prefaced by a substantial Introduction that outlines the work's context and explains its argument in detail. Also included is a translation of the Introduction (in French) to the 1976 edition of

the Latin text by Hubert Hubien.

The Political Logic of Poverty Relief Jan 21 2020 The Political Logic of Poverty Relief places electoral politics and institutional design at the core of poverty alleviation. The authors develop a theory with applications to Mexico about how elections shape social programs aimed at aiding the poor. They also assess whether voters reward politicians for targeted poverty alleviation programs.

Thinking and Being Jul 27 2020 Opposing a long-standing orthodoxy of the Western philosophical tradition running from ancient Greek thought until the late nineteenth century, Frege argued that psychological laws of thought—those that explicate how we in fact think—must be distinguished from logical laws of thought—those that formulate and impose rational requirements on thinking. Logic does not describe how we actually think, but only how we should. Yet by thus sundering the logical from the psychological, Frege was unable to explain certain fundamental logical truths, most notably the psychological version of the law of non-contradiction—that one cannot think a thought and its negation simultaneously. Irad Kimhi's *Thinking and Being* marks a radical break with Frege's legacy in analytic philosophy, exposing the flaws of his approach and outlining a novel conception of judgment as a two-way capacity. In closing the gap that Frege opened, Kimhi shows that the two principles of non-contradiction—the ontological principle and the psychological principle—are in fact aspects of the very same capacity, differently manifested in thinking and being. As his argument progresses, Kimhi draws on the insights of historical figures such as Aristotle, Kant, and Wittgenstein to develop highly original accounts of topics that are of central importance to logic and philosophy more generally. Self-consciousness, language, and logic are revealed to be but different sides of the same reality. Ultimately, Kimhi's work elucidates the essential sameness of thinking and being that has exercised Western philosophy since its inception.

Reducing Underage Drinking Oct 30 2020 Alcohol use by young people is extremely dangerous - both to themselves and society at large. Underage alcohol use is associated with traffic fatalities, violence, unsafe sex, suicide, educational failure, and other problem behaviors that diminish the prospects of future success, as well as health risks " and the earlier teens start drinking, the greater the danger. Despite these serious concerns, the media continues to make drinking look attractive to youth, and it remains possible and even easy for teenagers to get access to alcohol. Why is this dangerous behavior so pervasive? What can be done to prevent it? What will work and who is responsible for making sure it happens? *Reducing Underage Drinking* addresses these questions and proposes a new way to combat underage alcohol use. It explores the ways in which may different individuals and groups contribute to the problem and how they can be enlisted to prevent it. *Reducing Underage Drinking* will serve as both a game plan and a call to arms for anyone with an investment in youth health and safety.

Lean Logic Nov 30 2020 *Lean Logic* is David Fleming's masterpiece, the product of more than thirty years' work and a testament to the creative brilliance of one of Britain's most important intellectuals. A dictionary unlike any other, it leads readers through Fleming's stimulating exploration of fields as diverse as culture, history, science, art, logic, ethics, myth, economics, and anthropology, being made up of four hundred and four engaging essay-entries covering topics such as Boredom, Community, Debt, Growth, Harmless Lunatics, Land, Lean Thinking, Nanotechnology, Play, Religion, Spirit, Trust, and Utopia. The threads running through every entry are Fleming's deft and original analysis of how our present market-based economy is destroying the very foundations--ecological, economic, and cultural--on which it depends, and his core focus: a compelling, grounded vision for a cohesive society that might weather the consequences. A society that provides a satisfying, culturally-rich context for lives well lived, in an economy not reliant on the impossible promise of eternal economic growth. A society worth living in. Worth fighting for. Worth contributing to. The beauty of the dictionary format is that it allows Fleming to draw connections without detracting from his in-depth exploration of each topic. Each entry

carries intriguing links to other entries, inviting the enchanted reader to break free of the imposed order of a conventional book, starting where she will and following the links in the order of her choosing. In combination with Fleming's refreshing writing style and good-natured humor, it also creates a book perfectly suited to dipping in and out. The decades Fleming spent honing his life's work are evident in the lightness and mastery with which *Lean Logic* draws on an incredible wealth of cultural and historical learning--from Whitman to Whitefield, Dickens to Daly, Kropotkin to Kafka, Keats to Kuhn, Oakeshott to Ostrom, Jung to Jensen, Machiavelli to Mumford, Mauss to Mandelbrot, Leopold to Lakatos, Polanyi to Putnam, Nietzsche to Næss, Keynes to Kumar, Scruton to Shiva, Thoreau to Toynbee, Rabelais to Rogers, Shakespeare to Schumacher, Locke to Lovelock, Homer to Homer-Dixon--in demonstrating that many of the principles it commends have a track-record of success long pre-dating our current society. Fleming acknowledges, with honesty, the challenges ahead, but rather than inducing despair, *Lean Logic* is rare in its ability to inspire optimism in the creativity and intelligence of humans to nurse our ecology back to health; to rediscover the importance of place and play, of reciprocity and resilience, and of community and culture. ----- Recognizing that *Lean Logic*'s sheer size and unusual structure could be daunting, Fleming's long-time collaborator Shaun Chamberlin has also selected and edited one of the potential pathways through the dictionary to create a second, stand-alone volume, *Surviving the Future: Culture, Carnival and Capital in the Aftermath of the Market Economy*. The content, rare insights, and uniquely enjoyable writing style remain Fleming's, but presented at a more accessible paperback-length and in conventional read-it-front-to-back format.

Incerto 4-Book Bundle Dec 20 2019 Nassim Nicholas Taleb's landmark *Incerto* series is an investigation of luck, uncertainty, probability, opacity, human error, risk, disorder, and decision-making in a world we don't understand, in nonoverlapping and standalone books. All four volumes—*Antifragile*, *The Black Swan*, *Foiled by Randomness*, and the expanded edition of *The Bed of Procrustes*, updated with more than 50 percent new material—are now together in one ebook bundle. **ANTIFRAGILE** “Startling . . . richly crammed with insights, stories, fine phrases and intriguing asides.”—*The Wall Street Journal* Just as human bones get stronger when subjected to stress and tension, many things in life benefit from disorder, volatility, and turmoil. What Taleb has identified and calls “antifragile” is that category of things that not only gain from chaos but need it in order to survive and flourish. The resilient resists shocks and stays the same; the antifragile gets better and better. What is crucial is that the antifragile loves errors, as it incurs small harm and large benefits from them. Spanning politics, urban planning, war, personal finance, economic systems, and medicine in an interdisciplinary and erudite style, *Antifragile* is a blueprint for living in a Black Swan world. **THE BLACK SWAN** “[A book] that altered modern thinking.”—*The Times* (London) A black swan is a highly improbable event with three principal characteristics: It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random and more predictable. The astonishing success of Google was a black swan; so was 9/11. In this groundbreaking and prophetic book, Taleb shows that black swan events underlie almost everything about our world, from the rise of religions to events in our own personal lives, and yet we—especially the experts—are blind to them. **FOOLED BY RANDOMNESS** “[*Foiled by Randomness*] is to conventional Wall Street wisdom approximately what Martin Luther's ninety-five theses were to the Catholic Church.”—Malcolm Gladwell, *The New Yorker* Are we capable of distinguishing the fortunate charlatan from the genuine visionary? Must we always try to uncover nonexistent messages in random events? *Foiled by Randomness* is about luck: more precisely, about how we perceive luck in our personal and professional experiences. Set against the backdrop of the most conspicuous forum in which luck is mistaken for skill—the markets—*Foiled by Randomness* is an irreverent, eye-opening, and endlessly entertaining exploration of one of the least understood forces in our lives. **THE BED OF PROCRUSTES** “Taleb's crystalline nuggets of thought stand alone like

esoteric poems.”—Financial Times This collection of aphorisms and meditations expresses Taleb’s major ideas in ways you least expect. The Bed of Procrustes takes its title from Greek mythology: the story of a man who made his visitors fit his bed to perfection by either stretching them or cutting their limbs. With a rare combination of pointed wit and potent wisdom, Taleb plows through human illusions, contrasting the classical views of courage, elegance, and erudition against the modern diseases of nerdiness, philistinism, and phoniness.

Love and Logic Magic for Early Childhood Jun 18 2022 Let Jim Fay and Charles Fay, Ph.D., help you start your child off on the right foot. The tools in Love and Logic Magic for Early Childhood will give you the building blocks you need to create children who grow up to be responsible, successful teens and adults. And as a bonus you will enjoy every stage of your child's life and look forward to sharing a lifetime of joy with them.

The Little Logic Book Jun 06 2021 Written by four members of the Calvin College philosophy department, The Little Logic Book is a valuable resource for teachers and undergraduate students of philosophy. In addition to providing clear introductions to the modes of reasoning students encounter in their philosophy course readings, it includes a nuanced description of common informal fallacies, a narrative overview of various philosophical accounts of scientific inference, and a concluding chapter on the ethics of argumentation. The book features engaging dialogues on social, philosophical and religious issues based on the styles of argument taken up in the chapters. In additions to core concepts, distinctions, explanations, rules of inference, methods of assessment, and examples, The Little Logic Book provides philosophical commentary that will stimulate discussion of the assumptions and implications of various kinds of human reasoning. Free downloadable exercises are available from the publisher.

Beyond Consequences, Logic, and Control Feb 26 2023

Emotional Nov 18 2019 We’ve all been told that thinking rationally is the key to success. But at the cutting edge of science, researchers are discovering that feeling is every bit as important as thinking. You make hundreds of decisions every day, from what to eat for breakfast to how you should invest, and not one of those decisions would be possible without emotion. It has long been said that thinking and feeling are separate and opposing forces in our behavior. But as Leonard Mlodinow, the best-selling author of *Subliminal*, tells us, extraordinary advances in psychology and neuroscience have proven that emotions are as critical to our well-being as thinking. How can you connect better with others? How can you make sense of your frustration, fear, and anxiety? What can you do to live a happier life? The answers lie in understanding your emotions. Journeying from the labs of pioneering scientists to real-world scenarios that have flirted with disaster, Mlodinow shows us how our emotions can help, why they sometimes hurt, and what we can learn in both instances. Using deep insights into our evolution and biology, Mlodinow gives us the tools to understand our emotions better and to maximize their benefits. Told with his characteristic clarity and fascinating stories, *Emotional* explores the new science of feelings and offers us an essential guide to making the most of one of nature’s greatest gifts.

Facing Up to Scarcity Apr 16 2022 *Facing Up to Scarcity* offers a powerful critique of the nonconsequentialist approaches that have been dominant in Anglophone moral and political thought over the last fifty years. In these essays Barbara H. Fried examines the leading schools of contemporary nonconsequentialist thought, including Rawlsianism, Kantianism, libertarianism, and social contractarianism. In the realm of moral philosophy, she argues that nonconsequentialist theories grounded in the sanctity of "individual reasons" cannot solve the most important problems taken to be within their domain. Those problems, which arise from irreducible conflicts among legitimate (and often identical) individual interests, can be resolved only through large-scale interpersonal trade-offs of the sort that nonconsequentialism foundationally rejects. In addition to scrutinizing the internal logic of

nonconsequentialist thought, Fried considers the disastrous social consequences when nonconsequentialist intuitions are allowed to drive public policy. In the realm of political philosophy, she looks at the treatment of distributive justice in leading nonconsequentialist theories. Here one can design distributive schemes roughly along the lines of the outcomes favoured—but those outcomes are not logically entailed by the normative premises from which they are ostensibly derived, and some are extraordinarily strained interpretations of those premises. Fried concludes, as a result, that contemporary nonconsequentialist political philosophy has to date relied on weak justifications for some very strong conclusions.

The Body Keeps the Score Sep 09 2021 An expert on traumatic stress outlines an approach to healing, explaining how traumatic stress affects brain processes and how to use innovative treatments to reactivate the mind's abilities to trust, engage others, and experience pleasure--

Logic Jan 13 2022 Provides an essential introduction to classical logic.

Ideas Have Consequences Feb 14 2022 Originally published in 1948, at the height of post–World War II optimism and confidence in collective security, *Ideas Have Consequences* uses “words hard as cannonballs” to present an unsparing diagnosis of the ills of the modern age. Widely read and debated at the time of its first publication, the book is now seen as one of the foundational texts of the modern conservative movement. In its pages, Richard M. Weaver argues that the decline of Western civilization resulted from the rising acceptance of relativism over absolute reality. In spite of increased knowledge, this retreat from the realist intellectual tradition has weakened the Western capacity to reason, with catastrophic consequences for social order and individual rights. But Weaver also offers a realistic remedy. These difficulties are the product not of necessity, but of intelligent choice. And, today, as decades ago, the remedy lies in the renewed acceptance of absolute reality and the recognition that ideas—like actions—have consequences. This expanded edition of the classic work contains a foreword by *New Criterion* editor Roger Kimball that offers insight into the rich intellectual and historical contexts of Weaver and his work and an afterword by Ted J. Smith III that relates the remarkable story of the book’s writing and publication.

The Brain from Inside Out Apr 23 2020 Is there a right way to study how the brain works? Following the empiricist's tradition, the most common approach involves the study of neural reactions to stimuli presented by an experimenter. This 'outside-in' method fueled a generation of brain research and now must confront hidden assumptions about causation and concepts that may not hold neatly for systems that act and react. György Buzsáki's *The Brain from Inside Out* examines why the outside-in framework for understanding brain function have become stagnant and points to new directions for understanding neural function. Building upon the success of *Rhythms of the Brain*, Professor Buzsáki presents the brain as a foretelling device that interacts with its environment through action and the examination of action's consequence. Consider that our brains are initially filled with nonsense patterns, all of which are gibberish until grounded by action-based interactions. By matching these nonsense "words" to the outcomes of action, they acquire meaning. Once its circuits are "calibrated" by action and experience, the brain can disengage from its sensors and actuators, and examine "what happens if" scenarios by peeking into its own computation, a process that we refer to as cognition. *The Brain from Inside Out* explains why our brain is not an information-absorbing coding device, as it is often portrayed, but a venture-seeking explorer constantly controlling the body to test hypotheses. Our brain does not process information: it creates it.
