THE MANUAL FOR LIVING is the first and best primer for living the best possible life -- as helpful in the twenty-first century as it was in the first. Epictetus's teachings rank among the greatest wisdom texts of human civilization. Epictetus taught that philosophy is a way of life and not just a theoretical discipline. To Epictetus, all external events are beyond our control; we should accept calmly and dispassionately whatever happens. However, individuals are responsible for their own actions, which they can examine and control through rigorous self-discipline. By putting into practice the ninety-three wise instructions that make up The Art of Living, readers learn to successfully meet the challenges of everyday life. Many creatures are helped when two animals refuse to conform to the laws of the jungle. Of all the animals the elephant rescues, only the tiny ant returns the favour. Improving product quality has become essential for food chains in developing countries. Quality and innovation in food chains: lessons from Africa presents a set of case studies on food quality improvement and innovation in African food chains, with cases from South Africa, Ethiopia, Benin, Uganda and Senegal. The book is based on interdisciplinary collaborative research projects. An interdisciplinary approach leads to better insights in the opportunities and constraints for quality improvement, and helps public and private actors in seizing the opportunities and removing the constraints. This publication shows how a co-innovation perspective can be developed and applied. Co-innovation entails the combination of technical, organisational and institutional changes, the involvement of various chain actors, and the introduction of complementary innovations at different levels of the food chain. Quality and innovation in food chains: lessons from Africa is an essential read for anyone involved in studying, supporting and implementing quality improvements and innovations in food chains. This is a practical guide to the specific issues that affect the marketing of wine at an international level. The author covers theory and the results of research but the focus is on the nuts and bolts of marketing based on case studies. Includes authors, titles, subjects. "A long-needed study of the creation stories and legends of the Creek Indian people and their neighbors...including the influential Yuchi legends and Choctaw myths as well as those of the Hitchiti, Alabama, and Muskogee." -Charles R. McNeil, Msueum of Florida History, Tallahassee The creation stories, myths, and migration legends of the Creek Indians who once populated southeastern North America are centuries--if not millennia--old. For the first time, an extensive collection of all known versions of these stories has been compiled from the reports of early ethnographers, sociologists, and missionaries, obscure academic journals, travelers' accounts, and from Creek and Yuchi people living today. The Creek Confederacy originated as a political alliance of people from multiple cultural backgrounds, and many of the traditions, rituals, beliefs, and myths of the culturally differing social groups became communal property. Bill Grantham explores the unique mythological and religious contributions of each subgroup to the social entity that historically became known as the Creek Indians. Within each topical chapter, the stories are organized by language group following Swanton's classification of southeastern tribes: Uchean (Yuchi), Hitchiti, Alabama, Muskogee, and Choctaw--a format that allows the reader to compare the myths and legends and to retrieve information from them easily. A final chapter on contemporary Creek myths and legends includes previously unpublished modern versions. A glossary and phonetic guide to the pronunciation of native words and a historical and biographical account of the collectors of the stories and their sources are provided. Bill Grantham, associate professor of anthropology at Troy State University in Alabama, is anthropological consultant to the Florida Tribe of Eastern Creeks. He has contributed chapters to several books, including The Symbolic Role of Animals in Archaeology. WINNER OF THE 2007 DONALD HALL PRIZE IN POETRY Selected by Bob Hicok Burn and Dodge is part serious/part serious play and opens with a frank and occasionally antic exploration of contemporary vices, such as Guilt, Envy, and Regret. Some poems "dodge" such preoccupations by playing with a nonce form called sonnet/ghazal. The collection contains a sequence of poems called "Current Events," based on newspaper stories. that is also a playful meditation on the nature of the interrogative pronouns (Who, What, Where, When . . .) as well as another series of homophonic sonnets called "Clare-Hewn," which are aural "translations" of John Clare. Manual for Living offers three distinct approaches to life, each one riven by flashes of joy and despair, and all conditions in between. As in all of her work, Dolin's lyric voice attends to language and the world equally. Her verbal sleights-of-hand offer readers insights for ways to live. Manual for Living is a wise book: drink deeply from it. The Georgia Pest Management Handbook provides current information on selection, application, and safe use of pest control chemicals. This handbook has recommendations for pest control around homes and on pets; for pests of home garden vegetables, fruits, and ornamentals; and for pests of public health interest associated with our homes. Cultural, biological, physical, and other types of control are recommended where appropriate. Pesticide recommendations are based on information on the manufacturer labels and on performance data from research and extension trials at the University of Georgia and its sister institutions. Because environmental conditions, the severity of pest pressure, and methods of application vary widely, recommendations do not imply that performance of pesticides will always be acceptable. This publication is intended to be used only as a guide. Trade and brand names are used only for information. The University of Georgia does not guarantee nor warrant published standards on any product mentioned; nor does the use of a trade or brand name imply approval of any product to the exclusion of others that may also be suitable. Always follow the use instructions and precautions on the pesticide label. While there have been many claims of the benefits of teas through the years, and while there is nearly universal agreement that drinking tea can benefit health, there is still a concern over whether the lab-generated results are representative of real-life benefit, what the risk of toxicity might be, and what the effective-level thresholds are for various purposes. Clearly there are still questions about the efficacy and use of tea for health benefit. This book presents a comprehensive look at the compounds in black, green, and white teas, their reported benefits (or toxicity risks) and also explores them on a health-condition specific level, providing researchers and academics with a single-volume resource to help in identifying potential treatment uses. No other book on the market considers all the varieties of teas in one volume, or takes the disease-focused approach that will assist in directing further research and studies. Interdisciplinary presentation of material assists in identifying potential cross-over benefits and similarities between tea sources and diseases Assists in identifying therapeutic benefits for new product development Includes coverage and comparison of the most important types of tea - green, black and white "This book begins the attempt to answer many of the archaeological questions we are finally asking about the long-ignored but crucially important and ever-present social roles of gender among native Americans in the Southeast." -- Nancy Marie White, University of South Florida, coeditor of Grit-Tempered: Early Women Archaeologists in the Southeastern United States In the first book about the archaeology of gender in native societies of southeastern North America, these lively essays reconstruct the different social roles and relationships adopted by women and men before and after the arrival of Europeans in the 16th century. Case studies explore the ways in which gender differences affected people's daily lives by examining material evidence from archaeological sites, including grave goods, human remains, spatial configurations of burials and architecture, and evidence for economic specialization and the division of labor within households.
