Virology is one of the most dynamic areas of clinical medicine. The new second edition of this essential reference has been extensively revised and updated to incorporate the latest developments and relevant citations. Covering pathogenesis, epidemiology, diagnosis, treatment, and prevention, Clinical Virology informs scientists and health care professionals about all the medically relevant aspects of this rapidly evolving field. Clinical Virology is divided into two major sections. The first section addresses infections and syndromes related to particular organ systems, as well as the fundamentals of modern medical virology, including immune responses and vaccinology, diagnostics, antivirals, and gene therapy. The second section provides agent-specific chapters that detail the virology, epidemiology, pathogenesis, clinical manifestations, laboratory diagnosis, and prevention and treatment of important human viral pathogens. Offering comprehensive, original coverage of the viruses that cause human disease, this is the definitive reference work on clinical virology. Key Features Common templates for the syndrome-specific and separately for the agent-specific chapters allow the reader to readily access material New chapters on TTV and zoonotic paramyxoviruses Covers molecular biology, pathogenesis, immunity, clinical manifestations, treatment, and prevention Contributors are all internationally recognized experts actively involved in their fields To see the complete table of contents click here Accompanying CD-ROM contains ... "a companion eBook version of Molecular diagnostics : for the clinical laboratorian, Second edition ... for downloading and use in the reader's PC or PDA."--Page 4 of cover. Advances in technology, such as MP3 players, the Internet and DVDs, have led to the production, storage and distribution of a wealth of audio signals, including speech, music and more general sound signals and their combinations. MPEG-7 audio tools were created to enable the navigation of this data, by providing an established framework for effective multimedia management. MPEG-7 Audio and Beyond: Audio Content Indexing and Retrieval is a unique insight into the technology, covering the following topics: the fundamentals of MPEG-7 audio, principally low-level descriptors and sound classification and similarity; spoken content description, and timbre, melody and tempo music description tools; existing MPEG-7 applications and those currently being developed; examples of audio technology beyond the scope of MPEG-7. Essential reading for practising electronic and communications

engineers designing and implementing MPEG-7 compliant systems, this book will also be a useful reference for researchers and graduate students working with multimedia database technology. Advances in genomic and proteomic profiling of disease have transformed the field of molecular diagnostics, thus leading the way for a major revolution in clinical practice. While the range of tests for disease detection and staging is rapidly expanding, many physicians lack the knowledge required to determine which tests to order and how to interpret results. *Molecular Diagnostics* provides a complete guide to the use and interpretation of molecular testing in the clinical arena. No other available resource offers this emphasis, comprehensive scope, and practical utility in the clinical setting. Serves as the definitive reference for molecular pathologists worldwide. Covers a variety of molecular techniques including next generation sequencing, tumor somatic cell genotyping, infectious and genetic disease testing, and pharmacogenetics. Discusses in the detail issues concerning quality assurance, regulation, ethics, and future directions for the science. Collection of the monthly climatological reports of the United States by state or region, with monthly and annual national summaries. "PCR (Polymerase Chain Reaction) technology has become an indispensable component of routine veterinary diagnostics. However, a number of pitfalls and limiting factors affect its sensitivity and specificity of detection. It is imperative that veterinary "

"The background and history of the various proposals since its inception in the early 1970's for a Mackenzie Valley gas pipeline in the Northwest Territories have been well documented. Within the most recent push of the last few years to get approval and construction started, the Proponent (Including the Producer and Aboriginal Pipeline Groups) have expressed a desire to have a pipeline in place and operating by 2010. As with many ongoing projects in the logistics and planning stages many changes have been made to streamline, simplify, and improve the overall venture. It is these changes and new release of data that was analysed for content relating to requirements of granular resources in terms of when and where, the quantity and quality, and the granular deposits projected to provide these resources. The following data, image manipulation, and data analysis was conducted using a Geographical Information System (GIS) called Manifold GIS Universal Edition 6.5. Preliminary Engineering Alignment Sheets dated February 1, 2005 reveal terrain units along the pipeline right-of-way. The 23 images containing this information were georegistered using a combination of matchline coordinates in degree-minute-second format and visual identification using images from the Mackenzie Gathering System COGOA Volume 4, given in UTM coordinates. The COGOA Volume 4 maps were georeferenced in the report titled ?Summary of Granular Resource Requirements and Availability for the Mackenzie Valley Gas Pipeline Corridor? March 2005 by Raymond Baksi. With the help of the Canadian Spatial Reference System GSRUG's online computation, the degree-minute-second coordinates were converted to UTM coordinates and the Algorithmic method 'Affine' (Scale, shift, rotate) in Manifold was applied to georegister the images. Terrain units depicting sand and gravel within a corridor around the gathering pipelines were digitized into area polygons. One-hundred-seventy-eight (178) in total were identified and logged, 73 of those were unique values. Pits, roads, and water sources were extracted from 1:50000 scale images of the route, georeferenced and provided by Ward Kilby at Cal Data Ltd. There were 126 distinct pits identified, 143 water sources, and 340 road or road segments connecting the pits, water sources, and the pipeline route. Land and water project permit applications for each of the four (4) land claim settlement areas; Gwich'in, Inuvialuit, Sahtu, and Deh Cho Regions were reviewed for mention of borrow materials. A hyperlink document tree was created for each of these applications to guide those interested in borrow material directly to those sections. Imperial Oil proposed several changes to the project on July 26, 2005. The Inuvik area facility would be relocated approximately 16 kilometres south down the pipeline from its initial location, and eight (8) pipeline line segments represent re-routes. These pipeline route segments totalled 77.3 kilometres and in all cases situated such that they shortened the total length of the pipeline. Although certainly not new, the Mackenzie Highway route was digitized from the initial 1974 Public Works Canada Western Region report. Completion of construction and ongoing maintenance of this highway which runs parallel to the proposed pipeline will compete for the same granular resources. The Proponent provided three large data sets, Pipeline Landform, Pipeline Sensitivity and Pipeline Vegetation prepared by AMEC Americas Limited. The pipeline landform images contained detailed polygons representing landform types. DIAND already has a set of data (from terrain units maps) representing sand and gravel landform features, so only the footprints of the 159 AMEC Pipeline landform images were digitized. If, at a later time, the data contained within these images is necessary it can easily be extracted from the georegistered files. With the high transportation costs and limited construction season in the north there is a concern over the correct distribution of granular resources,

relative to proposed linear projects in the Mackenzie Valley. A comparison between the proposed pipeline and the Mackenzie Highway potential granular extraction haulage distance was prepared to better understand the competitive nature for these resources. Imaginary haulage buffers were created around the highway and the pipeline in one (1) kilometre increments, five (5) kilometres and 19 kilometres respectively. These buffers overlapped at various locations. This area of overlap is an area that will be "stressed" for granular resources. In total 95 different combinations of pipeline and highway overlaps were compared and percentage overlaps calculated. Five (5) facility relocations and approximately 117 kilometres of the pipeline and gathering pipeline have been proposed to be re-routed by the project update (10800) on November 23, 2003. The reduction in the total number of compressor stations by one (1) and the re-routed pipeline will shorten the total length of the pipeline by roughly 26 kilometres. The number of primary borrow source sites cited for granular extraction has increased by one (1) to 68 and secondary sites have decreased by three (3) to 46. Despite the total reduction in granular sources, estimated granular resource requirements have increased by 1.6 Mm³. This data was extracted from eight (8) useful images provided in the report submitted by Sandy Martin on behalf of Imperial Oil. ... The borrow sites identified in the Environmental Impact Statement Volume 2 Project Description from August 2004 were compared with that of the newly released February 2006 update Mackenzie Gas Project EIS Additional Information for the Joint Review Panel Environmental Inputs and Outputs. This report also estimates the total increase in volume of required granular material at 1.6 million cubic meters (Mm³) for a total of 6.5 Mm³. There were a total of 14 borrow sites added and 22 removed from the official list of granular resources sites. This results in a total of eight (8) less granular sites under consideration for use. Additionally, some borrow sites initially considered primary sites have moved to become secondary sites and some secondary sites moved to primary consideration" -- ASTIS [online] database.

This is a Packt Beginner's Guide, which means it is packed with clear step-by-step instructions for performing the most useful tasks in MooTools. You will learn by doing and you will start learning immediately. This book is perfect for MooTools newcomers. You do not require any familiarity with MooTools whatsoever, only a willingness to learn. Basic knowledge of JavaScript syntax and concepts is the only requirement. This book will allow you to grasp the basics of MooTools so that you will be well on the way to creating exciting, customizable web pages and applications. "For clinical chemistry and biomedical applications, reference materials (RMs) or certified reference materials (CRMs) may take the form of neat materials of assessed purity, or solutions of analytes. A Standard Reference Material (SRM) is a CRM issued by the United States National Institute of Standards and Technology (NIST). As SRMs are precious commodities, they typically are not intended for routine clinical or experimental applications as controls. Intended use descriptions often accompany supporting documentation of such standards. As part of continued NIST commitment to healthcare, recent NIST workshops have addressed standards and technology in areas such as nanotechnology and early cancer detection, HER2 testing of breast cancer, gene expression and serum proteomics for early cancer detection. Standards arise in response to clinical needs. Working in partnership with the standards user communities, NIST serves the national measurements community and has the specific federally mandated responsibility to meet high-priority reference material needs." A book of broad interest to professionals, dam engineers and managers, and to organizations responsible for dam development and management, RCC Dams offers a topical account of the design and operation of roller compacted concrete dams, describing the latest developments and innovative technologies in the field. The book considers planning and design, materials and construction, as well as the operation and performance of RCC dams. Includes information on infection detection and prevention and control, diagnostic technologies, bacteriology, antibacterial, antiviral, antifungal, and antiparasitic agents and susceptibility test methods, virology, mycology, and parasitology. This book consists of articles from Wikia or other free sources online. Pages: 48. Chapters: Archive formats, Audio file formats, Binary file formats, Chemical file formats, Container formats, Disk image file formats, Document file formats, Executable file formats, Extensions, Filename enumeration file formats, Font file formats, Game file formats, Graphics file formats, Presentation file formats, Source files, Spreadsheet file formats, Text file formats, Web file formats, 7z, Cabinet file, Cross-Platform Installer Module, JAR, RAR, ZIP, MP3, Windows Media Audio, Binary file, JPEG file, Portable Network Graphics, Simplified molecular input line entry specification, 3GP, Flash video, Matroska, MPEG-4 Part 14, Ogg, ISO image, Open XML Paper Specification, Portable Document Format, Rich Text Format, Rich Text Format Directory, RTF, Cross-Platform Installer Module, JAR, HTACCESS, Filename extension, File format, Internet media type, Microsoft InfoPath Form Template, Open Packaging Convention,

Opera widget, Resource Description Framework, Outline Processor Markup Language, Shortcut, Torrent file, TrueType font file, Animated Portable Network Graphics, Graphics file format, Icon, JPEG, JPEG file, Portable Document Format, Portable Network Graphics, Microsoft PowerPoint 97 - 2003 Presentation, Synchronized Multimedia Integration Language, JavaScript source file, Java source file, Comma-separated values, Autorun file, Cascading Style Sheets, Comma-separated values, Configuration settings file, Cue sheet, Document Type Definition, HTACCESS, ICalendar, JavaScript source file, Java source file, M3U, Plain text file, Portable Game Notation, Rich Text Format, Robots exclusion protocol, RTF, Simplified molecular input line entry specification, Text file, HyperText Markup Language, PHP, XAML Browser Application. Excerpt: 7z is a compressed archive file format that supports several different data compression, encryption and pre-processing filters. The 7z format initially... This book was the first internet guide specifically written for musicians. Now fully revised and updated, the second edition is loaded with even more practical information on how to take full advantage of all the information age has to offer. Topics covered include: equipment requirements; getting online; e-mail; chat, IRC and instant messaging; MP3s and compressed audio; how to build your first website; internet radio and streaming audio; file sharing; selling music online; building web traffic; and more. A musician and software executive, Todd Souvignier is co-founder and CTO of Exploit Systems, Inc. His writing has appeared in Mix and Electronic Musician magazines. Gary Hustwit is the author of Releasing an Independent Record and Getting Radio Airplay. He has written for Billboard and Guitar World. The background and history of the various proposals since its inception in the early 1970's for a Mackenzie Valley gas pipeline in the Northwest Territories have been well documented. Within the most recent push of the last few years to get approval and construction started, the Proponent (Including the Producer and Aboriginal Pipeline Groups) have expressed a desire to have a pipeline in place and operating by 2010. As with many ongoing projects in the logistics and planning stages many changes have been made to streamline, simplified, and improve the overall venture. It is these changes and new release of data that was analysed for content relating to requirements of granular resources in terms of when and where, the quantity and quality, and the granular deposits projected to provide these resources. The following data, image manipulation, and data analysis was conducted using a Geographical Information System (GIS) called Manifold GIS Universal Edition 6.5. Preliminary Engineering Alignment Sheets dated February 1, 2005 reveal terrain units along the pipeline right-of-way. The 23 images containing this information were georegistered using a combination of matchline coordinates in degree-minute-second format and visual identification using images from the Mackenzie Gathering System COGOA Volume 4, given in UTM coordinates. The COGOA Volume 4 maps were georeferenced in the report titled "Summary of Granular Resource Requirements and Availability for the Mackenzie Valley Gas Pipeline Corridor" March 2005 by Raymond Baksi. With the help of the Canadian Spatial Reference System GSRUG's online computation, the degree-minute-second coordinates were converted to UTM coordinates and the Algorithmic method 'Affine' (Scale, shift, rotate) in Manifold was applied to georegister the images. Terrain units depicting sand and gravel within a corridor around the gathering pipelines were digitized into area polygons. One-hundred-seventy-eight (178) in total were identified and logged, 73 of those were unique values. Pits, roads, and water sources were extracted from 1:50000 scale images of the route, georeferenced and provided by Ward Kilby at Cal Data Ltd. There were 126 distinct pits identified, 143 water sources, and 340 road or road segments connecting the pits, water sources, and the pipeline route. Land and water project permit applications for each of the four (4) land claim settlement areas; Gwich'in, Inuvialuit, Sahtu, and Deh Cho Regions were reviewed for mention of borrow materials. A hyperlink document tree was created for each of these applications to guide those interested in borrow material directly to those sections. ... The borrow sites identified in the Environmental Impact Statement Volume 2 Project Description from August 2004 were compared with that of the newly released February 2006 update Mackenzie Gas Project EIS Additional Information for the Joint Review Panel Environmental Inputs and Outputs. This report also estimates the total increase in volume of required granular material at 1.6 million cubic meters (Mm³) for a total of 6.5 Mm³. There were a total of 14 borrow sites added and 22 removed from the official list of granular resources sites. This results in a total of eight (8) less granular sites under consideration for use. Additionally, some borrow sites initially considered primary sites have moved to become secondary sites and some secondary sites moved to primary consideration. This ongoing project has seen many changes over the life of the proposal. As the proponent group moves ever closer to construction, the finer details of the project will be negotiated and finalized. As these decisions are made they should be incorporated into the knowledge base

being built by DIAND. It can be reasonably expected that even after construction has commenced there will be further modifications. The Department of Indian Affairs and Northern Development in context of granular resources will likely want to stay abreast of the issues to continue its efforts in granular management. --

ASTIS (online) database. The role of classic and modern molecular methods in assessing disease aetiology is documented in this text, and the pathology of infectious diseases is explained in simple, practical terms. The text emphasizes the history, pathology, prevention and treatment of disease, and explores changes in human demographics, behaviours, technology, industry, economics, land use and travel, examining the effects of these on public health. Ultrasound in Liquid and Solid Metals focuses on the effect of intensive ultrasound on metals, including the analysis of the development of cavitation and acoustic flows in melts, mechanism of metals' spraying and crystallization, the formation of dislocation structure in crystals, diffusion, phase transformation, and plastic deformation. Physical fundamentals of intensive ultrasound effects are covered, and detailed discussions are presented on the engineering principles of equipment and material design for the practical use of ultrasound in the refining of melts, crystallization of ingots and molds, pulverization, plating, pressure working of metals, surface strengthening, and other processes.

Toutes les ressources pour exceller en SVT terminale S, avec l'objectif d'intégrer une filière sélective, après le bac. • Vous visez une classe prépa scientifique, une première année d'études de médecine, une école d'ingénieurs post bac... ? Cet ouvrage est pour vous. • Vous y trouverez de nombreuses ressources pour exceller en SVT : – un cours complet sur le programme de Tle, avec des encadrés post bac pour aller plus loin, – les méthodes et stratégies pour rendre une très bonne copie, – 200 sujets de type bac, pour s'entraîner intensivement, – des exercices orientés post bac, pour préparer efficacement un concours ou sa rentrée prochaine, – des corrigés détaillés, avec des conseils pour s'améliorer. • Notez qu'avec ce livre, vous pouvez également bénéficier d'un accès gratuit aux ressources du site <http://www.annabac.com> : fiches et podcasts de cours, quiz, exercices et sujets corrigés... RSS and Atom are specifications that give users the power to subscribe to information they want to receive and give content developers tools to provide continuous subscriptions to willing recipients in a spam-free setting. RSS and Atom are the technical power behind the growing millions of blogs on the Web. Blogs change the Web from a set of static pages or sites requiring programming expertise to update to an ever changing, constantly updated landscape that anyone can contribute to. RSS and Atom syndication provides users an easy way to track new information on as many Web sites as they want. This book offers you insight to understanding the issues facing the user community so you can meet users' needs by writing software and Web sites using RSS and Atom feeds. Beginning with an introduction to all the current and coming versions of RSS and Atom, you'll go step by step through the process of producing, aggregating, and storing information feeds. When you're finished, you'll be able to produce client software and Web sites that create, manipulate, aggregate, and display information feeds effectively. "This book is full of practical advice and tips for consuming, producing, and manipulating information feeds. I only wish I had a book like this when I started writing RSS Bandit." - Dare Obasanjo, RSS Bandit creator: <http://www.rssbandit.org/> Learn how to create dynamic, interactive, and responsive cross-browser web applications using this popular JavaScript framework. Covering all basic areas of nursing, including medical-surgical, paediatric, maternity and psychiatric, this volume documents strategies, concepts, principles and procedural guidelines. Community-based tips are provided in order to broaden the perspective for nursing practice. Special edition of the Federal register, containing a codification of documents of general applicability and future effect as of April 1 ... with ancillaries. Provides a social history of how the CIA used the psychedelic drug LSD as a tool of espionage during the early 1950s and tested it on U.S. citizens before it spread into popular culture, in particular the counterculture as represented by Timothy Leary, Allen Ginsberg, Ken Kesey, and others who helped spawn political and social upheaval. In the United States, hospitals annually report over 5 million cases of infectious-disease-related illnesses: clinical microbiology laboratories in these hospitals are engaged in detecting and identifying the pathogenic microorganisms in clinical specimens collected from these patients with suspected infections. Clearly, the timely and accurate detection/identification of these microbial pathogens is critical for patient treatment decisions and outcomes for millions of patients each year. Despite an appreciation that the outcome of an infectious-disease-related illness is directly related to the time required to detect and identify a microbial pathogen, clinical microbiology laboratories in the United States as well as worldwide have long been hampered by traditional culture-based assays, which may require prolonged incubation time for slowly growing microorganisms such as *Mycobacterium tuberculosis*. Moreover, traditional culture-based assays often require multiple steps with additional time needed for discernment of

species and/or detection of antimicrobial resistance. Finally, these traditional, slow multistep culture-based assays are labor-intensive and required skilled clinical microbiologists at the bench. Over the past several decades, advanced molecular techniques in diagnostic microbiology quietly have been revolutionizing the practice of clinical microbiology in the hospital setting. Indeed, molecular diagnostic testing in general and nucleic-acid-based amplification methods in particular have been heralded as diagnostic tools for the new millennium. There is no question that the development of rapid molecular techniques for nucleic acid amplification/characterization combined with automation and user-friendly software has greatly broadened the diagnostic capabilities of the clinical microbiology laboratory. These technical advances in molecular microbiology over the first decade of the 21st Century have profoundly influenced the physical structure of clinical microbiology laboratories as well as their staffing patterns, workflow, and turnaround time. These molecular microbiology advances have also resulted in the need for a revised and updated second edition of *Advanced Techniques in Diagnostic Microbiology*. This second edition again provides an updated and comprehensive description of the ongoing evolution of molecular methods for the diagnosis of infectious diseases. In addition, many new chapters have been added, including a chapter on the clinical interpretation and relevance of advanced technique results. The second edition, like the first edition, includes both a “techniques” section describing the latest molecular techniques and an “applications” section describing how these advanced molecular techniques are being used in the clinical setting. Finally, the second edition, like the first edition, utilizes a diverse team of authors who have compiled chapters that provide the reader with comprehensive and useable information on advanced molecular microbiology techniques. A foundational guide for integrating mobile technologies into your classroom! Designed to help educators deliver relevant instruction through the use of 21st-century technologies, this resource examines available low-cost hardware, explores free Web 2.0 tools, and sheds light on the pros and cons of using mobile technologies for instructional support. Emphasizing the ethical use of technology, the book identifies: Specific Web 2.0 options for supporting collaboration and communication in K–12 settings Strategies for practical applications A decision-making model for selecting appropriate mobile technologies and Web 2.0 tools for classroom use Recommended books, Web sites, and online reports and articles for reference This comprehensive manual serves as a source of basic and clinical information for the physician regarding viruses and viral diseases and as a reference source for laboratorians to aid in the diagnosis of virus infection by providing detailed information on individual techniques. Section one of the manual describes laboratory procedures to detect viruses, including quality control in the laboratory and specimen handling. Individual chapters provide information or a detailed protocol on how to set up and test samples for viral diagnosis. The second section focuses on the viral agents and the third is a reference of the various federal, state, and local laboratories that diagnose virus infections. A framework for the theory and practice of organizing that integrates the concepts and methods of information organization and information retrieval. Organizing is such a common activity that we often do it without thinking much about it. In our daily lives we organize physical things—books on shelves, cutlery in kitchen drawers—and digital things—Web pages, MP3 files, scientific datasets. Millions of people create and browse Web sites, blog, tag, tweet, and upload and download content of all media types without thinking “I’m organizing now” or “I’m retrieving now.” This book offers a framework for the theory and practice of organizing that integrates information organization (IO) and information retrieval (IR), bridging the disciplinary chasms between Library and Information Science and Computer Science, each of which views and teaches IO and IR as separate topics and in substantially different ways. It introduces the unifying concept of an Organizing System—an intentionally arranged collection of resources and the interactions they support—and then explains the key concepts and challenges in the design and deployment of Organizing Systems in many domains, including libraries, museums, business information systems, personal information management, and social computing. Intended for classroom use or as a professional reference, the book covers the activities common to all organizing systems: identifying resources to be organized; organizing resources by describing and classifying them; designing resource-based interactions; and maintaining resources and organization over time. The book is extensively annotated with disciplinary-specific notes to ground it with relevant concepts and references of library science, computing, cognitive science, law, and business. ? Seventy percent of patients who visit doctors in the Western world come because of cardio-pulmonary problems, or find that there is a significant cardio-pulmonary involvement even if they came for another reason. Thus, managing cardio-pulmonary problems is of major importance to everyone in internal medicine and its sub-specialties. This book covers the entire field of cardio-pulmonary problems in a concise and intensely practical manner. The authors of the various chapters illuminate their work with carefully structured tables and useful algorithms. This comparatively small book discusses all of the common conditions and pulmonology; but covers them from a clinically relevant and practical manner. This book gets to the point; no wasted or unnecessary background information. "Fisheries and limnological investigations in post--restoration Medical Lake suggested that phytoplankton biovolume levels were related to interactions occurring between trout and zooplankton. As trout populations increased, zooplankton standing crop decreased which resulted in an increase in phytoplankton biovolume levels. Computer simulation modeling was used to verify this relationship. Time series and multiple regression models were developed to simulate and predict phytoplankton biovolume. The models were constructed from seven years of fisheries and limnological data collected from 1978 to 1984. Each model was used to predict a mean phytoplankton biovolume for the growing season during 1985. Verification of the multiple regression model was performed by stocking trout into the lake to raise the population to the same level used in the computer simulation and then collecting field data in 1985 to test the model's predictions. Time series analysis was useful in predicting seasonal values of phytoplankton biovolume, but was not accurate in monthly predictions. The time series models, classical decomposition and Winter's exponential smoothing techniques, predicted mean phytoplankton biovolume levels from May to October of 1.23 and 1.16 mm³ l⁻¹, respectively. The multiple regression approach determined that the percentage of the total standing crop of *Daphnia pulex* which was consumed by the entire trout population appeared to be the most important variable regulating phytoplankton. The model predicted a mean July to October phytoplankton biovolume level of 1.05 mm³ l⁻¹ which was only 0.02 mm³ l⁻¹ less than the actual value. The accuracy of the model's predictions and the verification of the model's assumptions with independent data supported the hypothesis that the desired lower phytoplankton biovolumes in restored Medical Lake are related to higher standing crops of *Daphnia pulex* and low trout density"--Document.
