Philosophy of Education: An Anthology brings together the essential historical and contemporary readings in the philosophy of education. The readings have been selected for their philosophical merit, their focus on important aspects of educational practice and their readability. Includes classic pieces by Plato, Aristotle, Isocrates, Locke, Rousseau, Mill, and Dewey. Addresses topical issues such as teacher professionalism and accountability, the commercialization of schooling, multicultural education, and parental choice. Leading author, Gerry Gutek, discusses the major philosophical systems and then applies how these systems and ideologies contribute to educational theory. Examines the origin, meaning and relevance to teaching and learning. *New Perspectives on Philosophy and Education* is organized into three major parts: philosophies, ideologies, and theories of education. Part I examines philosophy and education, idealism, realism, pragmatism, existentialism and postmodernism and analyzes their educational implications; Part II examines Ideology, Nationalism, Liberalism, Conservatism, and Marxism and analyzes their educational implications; Part III deals with theory, Essentialism, Progressivism, Social Reconstructionism, Critical Theory, and Globalization in terms of their meaning for education. In drawing out the educational implications of these philosophies, ideologies, and theories, the author places them in the context of education, schooling, curriculum, and instruction. Pedagogical aspects include discussion questions, topics for reflection and research, websites, and suggested readings. This book provides an authoritative, yet accessible guide to the Philosophy of Education, its scope, its key thinkers and movements, and its potential contribution to a range of educational concerns. The text offers a balanced view of three key dimensions: first, in giving an equal weight to different styles and modes of philosophy; second, by including past and present perspectives on philosophy of education; and third, in covering both the general "perennial" issues in philosophy and issues of more contemporary concern. Section one of the book exemplifies different styles of philosophy, paying attention to the contemporary debates as to the nature, possibilities and limitations of these different approaches to philosophy of education. Section two is devoted to particular thinkers of the past, and more general coverage of the history of philosophy of education. Section three is dedicated to contemporary philosophic thought on education, providing the basis and reference point for an exploration of contemporary issues. The handbook is designed primarily to be useful to students studying the field of philosophy of education, in the context of the study of educational foundations or theory. But it is also designed to be of use to practising teachers who wish to gain easy access to current philosophical thinking on particular contemporary educational issues, and to educationalists of all types who want a succinct guide to questions relating to the nature, the history, and the current state of the art of philosophy of education. Visit Richard Bailey's website : here This important new book presents a 'dual strand' argument: Firstly, it gives a comprehensive account of methods in philosophy of education, with leading international figures in the field of writing from a variety of methodological and epistemological perspectives. Secondly, it examines their application in the 'real world' of education, using the topical area of children's rights as a basis for investigation. It will therefore be of interest to philosophers and educationalists alike. *Towards a Philosophy of Education* is the sixth volume of Charlotte Mason's six part homeschooling series, a series that is considered one of the finest ever written on education. *Towards a Philosophy of Education* gives the best overview of Mason's teaching philosophy. Written years after she was able to see her teaching methods in action she is able to give further examples and directions. Mason's method of education shows its strength through its widespread use today by private schools and homeschooling families. It is flexible and includes first-hand exposure to ideas through books in art, music, and poetry, nature observation as the primary means of early science teaching, use of manipulatives and real-life application to understand mathematical concepts and learning to reason, rather than rote memorization, and an emphasis on

character and on cultivating and maintaining good personal habits. The complete collection of Charlotte Mason's Original Homeschooling Series includes: Volume 1 - Home Education Volume 2 - Parents and Children Volume 3 - School Education Volume 4 - Ourselves Volume 5 - Formation Of Character Volume 6 - Towards A Philosophy of Education In this book, Dewey tries to criticize and expand on the educational philosophies of Rousseau and Plato. Dewey's ideas were seldom adopted in America's public schools, although a number of his prescriptions have been continually advocated by those who have had to teach in them. This Reader brings together a wide range of material to present an international perspective on topical issues in philosophy of education today. Focusing on the enduring trends in this field, this lively and informative Reader provides broad coverage of the field and includes crucial topics. With an emphasis on contemporary pieces that deal with issues relevant to the immediate real world, this book represents the research and views of some of the most respected authors in the field today. Wilfred Carr also provides a specially written introduction which provides a much-needed context to the role of philosophy in the current educational climate. Students of philosophy and philosophy of education will find this Reader an important route map to further reading and understanding. *Philosophy in Education: Questioning and Dialog in K-12 Classrooms* is a textbook in the fields of pre-college philosophy and philosophy of education, intended for philosophers and philosophy students, K-12 classroom teachers, administrators and educators, policymakers, and pre-college practitioners of all kinds. The book offers a wealth of practical resources for use in elementary, middle school, and high school classrooms, as well as consideration of many of the broader educational, social, and political topics in the field, including the educational value of pre-college philosophy, the philosophies of education that inform this philosophical practice, and the relevance of pre-college philosophy for pressing issues in contemporary education (such as education reform, child development, and prejudice and privilege in classrooms). The book includes sections on: the expansion of philosophy beyond higher education to pre-college populations; the importance of wondering, questioning and reflection in K-12 education; the ways that philosophy is uniquely suited to help students cultivate critical reasoning and independent thinking capacities; how to develop classroom communities of philosophical inquiry and their potentially transformative impact on students; the cultivation of philosophical sensitivity and positive identity formation in childhood; strategies for recognizing and diminishing the impact of social inequalities in classrooms; and the relationship between introducing philosophy in schools and education reform. With over 70,000 copies of the first edition in print, this radical treatise on public education has been a New Society Publishers' bestseller for 10 years! Thirty years in New York City's public schools led John Gatto to the sad conclusion that compulsory schooling does little but teach young people to follow orders like cogs in an industrial machine. This second edition describes the wide-spread impact of the book and Gatto's "guerrilla teaching." John Gatto has been a teacher for 30 years and is a recipient of the New York State Teacher of the Year award. His other titles include *A Different Kind of Teacher* (Berkeley Hills Books, 2001) and *The Underground History of American Education* (Oxford Village Press, 2000). Are children natural philosophers? They are curious about questions such as the meaning and purpose of being alive and whether we can know anything at all. Pre-college philosophy takes as a starting point young people's inherent interest in large questions about the human condition. *Philosophy and Education: Introducing Philosophy to Young People* seeks to illuminate the ways in which philosophy can strengthen and deepen pre-college education. The book examines various issues involved in teaching philosophy to young people at different grade levels, including assessing what teachers need in order to teach philosophy and describing several models for introducing philosophy into schools. Ways to explore specific branches of philosophy – ethics, epistemology, metaphysics, aesthetics, and logic – through literature, thought experiments, and games and activities, as well as traditional philosophy texts, are described. The book's final section considers student assessment and program evaluation, and analyzes the contributions pre-college philosophy can make to education in general. Teachers and educators – and parents – all want young people to grow up with the skills they need to pursue their own goals and become productive and successful adults. Thinking independently and reasoning clearly are central to these objectives. Philosophy helps students develop some of the analytic skills they need to engage in thoughtful decision-making throughout their lives, and the richness of the questions involved can help young people maintain their awareness of the world as marvelous and mysterious. This book, as it covers the philosophies of education, probes the fundamental issues of education while establishing educational priorities. This new edition of *Philosophy of Education: The Key Concepts* is an easy to use A-Z guide summarizing all the key terms, ideas and issues central to the study of educational theory today. Fully updated, the book is cross-referenced throughout and contains pointers to further reading, as well as new entries on such topics as: Citizenship and Civic Education Liberalism Capability Well-being Patriotism Globalisation Open-mindedness Creationism and Intelligent Design. Comprehensive and authoritative this highly accessible guide provides all that a student, teacher or policy-maker needs to know about the latest thinking on education in the 21st century.' First Published in 1996. This first of its kind Encyclopaedia charts the influence of philosophic ideas that have had the greatest influence on education from Ancient Greece to the present. It covers classical thinkers as Plato, Augustine, Hypatia, Locke and Rousseau, as well as recent figures such as Montessori, Heldegger, Du Bois and Dewey. It illuminates time-hounded ideas and concepts such as idealism, practical wisdom, scholasticism, tragedy and truth, as well as modern constructs as critical theory, existentialism, phenomenology, Marxism and post-Colonialism. The coverage consists of 228 articles by 184 contributors who survey the full spectrum of the philosophy of education. Philosophy is vital to the study of education, and a sound knowledge of different philosophical perspectives leads to a deeper engagement with the choices and commitments you make within your educational practice. This introductory text provides a core understanding of key moments in the history of Western philosophy. By introducing key transition points in that history, it investigates the plight of present day education, a period in which the aims and purposes of education have become increasingly unclear, leaving education open to the rise of instrumentalism and the forces of capital. Accessibly

written, the book carefully analyses the common assumptions and conflicted history of education, provoking questioning about its nature and purposes. The authors argue vigorously that thinking critically about education from a philosophical perspective will give practicing and trainee teachers, as well as students on undergraduate Education and Masters-level courses a fuller command of their own role and context. The book offers a concrete theory and practice of philosophy of education. It explores educational aspects of the Indian and western philosophy and philosophers. It can help students and teachers as well as teacher educators to analyze, reflect upon and improve their teaching practice from a philosophical point of view. It challenges students and teachers to incorporate both theory as well as practice of philosophy in their classroom teaching. Presents essays by leaders in the field of philosophy of education, organized in three sections on definitions of philosophy of education; variations on the canon, such as the aims of education, moral and ethical education, and politics; and current ideas in philosophical and educational discourse, including art and representation, ecology, gender, and power. No index. Annotation copyright by Book News, Inc., Portland, OR John White is one of the leading philosophers of education currently working in the Anglophone world. Since first joining the London Institute of Education in 1965, he has made significant contributions to the landscape of the discipline through his teaching, research and numerous publications. His academic work encompasses a broad range of rich philosophical issues, ranging from questions surrounding the child's mind, through the moral and pedagogical obligations of teachers and schools, to local and national questions of educational policy. In this volume, international contributors address key issues in the philosophy of education, touching on significant contemporary concerns and demonstrating the breadth and influence of John White's work. Each chapter critically examines, builds on, and pays tribute to John White's unique contribution, considering how his work has impacted on the discipline of education as we know it today. Topics covered include: policy and the role of philosophy of education liberal education the aims of education moral education leadership. Education, Philosophy and Wellbeing will appeal to postgraduate students and academics in the fields of history, policy, education studies, and philosophy, as well as to policy-makers, educational administrators and teachers. Revised and updated with 25 new essays, the fourth edition of this bestselling collection brings together more than 30 leaders in the field of educational theory. An engaging exploration of the ideas and trends shaping education in today's classrooms, Philosophy of Education includes topics on high-stakes testing, consumerism in education, and social justice issues in the classroom. How can we teach students moral values while avoiding indoctrination? How should a teacher deal with controversial issues in the classroom? What role should standards play in education, and who develops those standards? And why is the link between theory and practice in the classroom important in the first place? Philosophy of Education provides students, teachers, and administrators with a lively and accessible introduction to the central debates and issues in education today. Philosophy and Theory in Educational Research: Writing in the margin explores the practices of reading and writing in educational philosophy and theory. Showing that there is no 'right way' to approach research in educational philosophy, but illustrating its possibilities, this text invites an engagement with philosophy as a possibility – and opening possibilities – for educational research. Drawing on their own research and theoretical and philosophical sources, the authors investigate the important issue of what it means to read and write when there is no prescribed structure. Innovative in its contribution to the literature, this edited volume enlightens readers in three ways. The volume focuses on the practices of reading and writing that are central to research in educational philosophy, suggesting that these practices constitute the research, rather than simply reporting it. It is not a prescriptive guide and should not be read procedurally. Rather, it is intended to illustrate the possibilities for this kind of research, and to suggest starting points for those pursuing research projects. Finally, attention is given to the ways in which conducting educational philosophy can be educative in itself, both to the researcher in writing it, and to its audience in reading it. With contributions from international scholars in the field of educational philosophy, this book is a valuable guide for practitioner-researchers, taught postgraduate and doctoral students, and early career researchers in university education departments. Academic staff teaching research methods and seeking to introduce their students to philosophy-as-research without wishing to offer a prescriptive 'how to' guide will also find this book of particular interest. Philosophy of Education in Action is an innovative, inquiry-based introductory text that invites readers to study philosophy of education through the lens of their own observations and experiences. Structured according to a "Wonder Model of Inquiry," each chapter begins by posing a fundamental What if question about curriculum, pedagogy, and the role of the school before investigating the various philosophical perspectives that guide and influence educational practices. Classroom vignettes and examples of actual schools and educational programs help to ground philosophical perspectives in real-world scenarios, while the book's unique inquiry-based approach leads students to both think critically about philosophical questions and apply the concepts to their own teaching. Features of the text include: What if questions that structure each chapter to pique students' curiosity, stimulate creativity, and promote critical thinking. Authentic classroom vignettes that encourage students to analyze what it means to "do" philosophy and to reflect upon their own practices, examine their role in the educational process, and articulate their own philosophical beliefs. A concluding section asking readers to imagine and design their own hypothetical school or classroom as a project-based means of analyzing, synthesizing, and evaluating the different philosophies discussed. Accessible and thought-provoking, Philosophy of Education in Action provides a dynamic learning experience for readers to understand and apply philosophy in educational practice. The first edition of Nel Noddings' Philosophy of Education was acclaimed as the 'best overview in the field' by the journal Teaching Philosophy and predicted to 'become the standard textbook in philosophy of education' by Educational Theory. This classic text, originally designed to give the education student a comprehensive look at philosophical thought in relation to teaching, learning, research, and educational policy, has now been updated to reflect the most current thinking in the field. A revised chapter on Logic and Critical Thinking makes the topic more accessible to students and examines how critical thinking plays a role in light of the new Common

Core standards. Philosophy of Education introduces students to the evolution of educational thought, from the founding fathers to contemporary theorists, with consideration of both analytic and continental traditions. This is an essential text not only for teachers and future teachers, but also for anyone needing a survey of contemporary trends in philosophy of education. A general introduction to key issues in the philosophy of education. The chapters are accessible to readers with no prior exposure to philosophy of education, and provide both surveys of the general domain they address, and advance the discussion in those domains. Education, like every other important branch of knowledge, has its underlying philosophical problems. It is these problems and the attempts to solve them which together make up the philosophy of education. This book, first published in 1957, provides a simple explanation and illustration of what philosophy can (and cannot) do for educational thinking. This title will be of interest to students of the philosophy of education. Written specifically for education studies students, this accessible text offers a clear introduction to philosophy and education. It skilfully guides readers through this challenging and sometimes complex area bringing key philosophical ideas and questions to life in the context and practice of education. There is also a companion website to accompany the book, featuring live weblinks for each activity which can be visited at www.routledge.com/cw/haynes. The authors consider the implications of educational trends and movements through a variety of philosophical lenses such as Marxism, utopianism, feminism and poststructuralism. The book explores enduring themes such as childhood and contemporary issues such as the teaching of critical thinking and philosophy in schools. Features include: a range of individual and group activities that invite questioning and discussion case studies and examples from a variety of formal and informal education settings and contexts reference to philosophically informed practices of research, reading, writing and teaching suggestions for further reading in philosophy and education overviews and - and key questions for each chapter Drawing on readers' experiences of education, the book reveals the connections between philosophical ideas and educational policy and practice. Part of the Foundations in Education Studies series, this timely textbook is essential reading for students coming to the study of philosophy and education for the first time. The Philosophy of Education: An Introduction encourages the reader to actively engage with the philosophy of education and the carefully selected contributors bring the philosophy of education to life for the reader. Each chapter: focuses on a particular area of debate and explains the main concepts includes extracts from philosophical writing, followed by questions that guide the reader to critically and actively engage with the text guides the reader towards further reading and suggests next steps and more challenging sources or counter-pointed arguments. The Philosophy of Education: An Introduction is essential reading for education students and for trainee teachers on undergraduate and postgraduate programmes. It will also appeal to practicing teachers and educationalists who wish to engage with philosophical approaches to contemporary educational issues. The possibilities and importance of a spiritual dimension to education are subjects receiving increased consideration from educational practitioners, policymakers and philosophers. Spirituality, Philosophy and Education brings together contributions to the debate by a team of renowned philosophers of education. They bring to this subject a depth of scholarly and philosophical sophistication that was previously missing, and between them offer a wide-ranging exploration and analysis of what spiritual values have to offer contemporary education. The contributors address such subjects as what we mean by 'spiritual values'; scholarship and spirituality; spirituality and virtue; spirituality, science and morality; the shaping of character; the value of spiritual learning; spiritual development and the curriculum and many others. All students of the philosophy of education and anyone interested in how spiritual values might play a part in informing education policy and practice will find this stimulating collection a rich source of ideas and a major addition to the thinking on the meaning, role and possibilities of spirituality in education. This book is the first of its kind to critically examine the philosophy of Bernard Stiegler from the perspective of the philosophy of education. The editors of this book firmly believe that in the coming years Stiegler's philosophy will assume increasing importance and influence in both digital studies and the philosophy of education as his thought is a prism through which to understand how we live and work, and a means to anticipate what the future may hold for us all in the time of the Anthropocene. They are of the view that Stiegler's work will have a permanent impact on the intellectual terrain of the twenty-first century as his majestic conceptual architectonic will shape political, social and pedagogical debates in the coming decades. With this in mind, the contributors of this book take up his gauntlet to understand the risks and opportunities of the digital pharmakon and its impact on the educational milieu. The chapters in this book were originally published as a special issue of Educational Philosophy and Theory. There has always been a strong relationship between education and philosophy - especially political philosophy. Renewed concern about the importance and efficacy of political education has revived key questions about the connections between the power to govern, and the power to educate. Although these themes are not always prominent in commentaries, political writings have often been very deeply concerned with both educational theory and practice. This invaluable book will introduce the reader to key concepts and disputes surrounding educational themes in the history of political thought. The book draws together a fascinating range of educational pioneers and thinkers from the canon of philosophers and philosophical schools, from Plato and Aristotle, down to Edward Carpenter and John Dewey, with attention along the way paid to both individual authors like Thomas Hobbes and Mary Wollstonecraft, as well as to intellectual movements, such as the Scottish Enlightenment and the Utopian Socialists. Each thinker or group is positioned in their historical context, and each chapter addresses the structure of the theory and argument, considering both contemporaneous and current controversies. A number of themes run throughout the volume: an analysis of pedagogy, socialisation, schooling and university education, with particular relation to public and private life, and personal and political power references to the historical and intellectual context an overview of the current reception, understanding and interpretation of the thinker in question the educational legacy of the theories or theorists. This book will be of interest to students, researchers and scholars of education, as well as students and teachers of political theory, the history of political thought,

and social and political philosophy. Making Sense of Education provides a contemporary introduction to the key issues in educational philosophy and theory. Exploring major past and present conceptions of education, teaching and learning, this book makes philosophy of education relevant to the professional practice of teachers and student teachers, as well of interest to those studying education as an academic subject. The book is divided into three parts: education, teaching and professional practice: issues concerning education, the role of the teacher, the relationship of educational theory to practice and the wider moral dimensions of pedagogy learning, knowledge and curriculum: issues concerning behaviourist and cognitive theories of learning, knowledge and meaning, curriculum aims and content and evaluation and assessment schooling, society and culture: issues of the wider social and political context of education concerning liberalism and communitarianism, justice and equality, differentiation, authority and discipline. This timely and up-to-date introduction assists all those studying and/or working in education to appreciate the main philosophical sources of and influences on present day thinking about education, teaching and learning Just because there are problems today in education doesn't mean that we're stuck. There is so much potential. We foresee a place where students not only acquire academic knowledge, but also learn how to be in the world. It can be a positive fear-free environment in which young people can learn to thrive in changing times-where students are given the ability to seek out new challenges and create new experiences and be encouraged to do so. In this school, educators teach creativity and critical thinking, while cultivating self-discipline, self-knowledge, and freedom. Young people can leave this American institution open-minded and knowing the joys of cooperation, with a love of curiosity and learning, and aware of the world and their place in it. They can be unintimidated, unfettered and flexible in the years ahead. Our educational philosophy is that all students want to learn and can be taught. This book is not an operational manual, full of research and detailed step-by-step guides. This is a philosophical look at what our schools are about, what they should be about, and the practical steps we can take to move it along. What drives our beliefs and structures our ideas about schools are our own experiences in them. We thought about many of those big questions: What is an ideal society? What is possible? What can be taught? What is innate? What is the ultimate goal of an individual? Of a society? We found inspiration in the philosophies of many great minds before us and we tried to place our understanding of their ideas within the context of the modern American school. We believe that to do fundamental change educators must examine their own motivations, ideals, and philosophy, as well as those of their school. Improving education will take more than finding little tricks for getting through the daily grind a little easier-it will require looking at what educators and students are grinding toward and why. We do not believe that our book is anything more than a voice. Although suggestions for school reform should certainly come from many sources including educational researchers, parents, community members, administrators, teachers, and all students, both successful and struggling, there should be more emphasis on ideas coming from our teachers and students. They are the ones in the trenches. They know most clearly what goes on in the classroom and how school affects the lives of our young people. We are not academics or researchers, just two friends, a retired educator with over forty years of teaching experience and his former student. We are over fifty years apart in age and come from different family backgrounds yet we both care deeply about education. Over the years, as we sat in restaurants over breakfast or in cafes over coffee, an inspired exchange occurred. We challenged each other on almost every aspect of our educational philosophy. We shared our own personal experiences as a teacher and a student and we reflected on what we liked and what could have been better. We inquired and listened, gave and took. We found so much to agree on. We found so much to be hopeful about. As teachers talk to each other and to their students about what is going on in our schools, we would love more students to take it upon themselves to share their beliefs about what makes a good education and a positive educational environment. By interacting and sharing, we can learn together. We hope that in reading about our values and beliefs, you will think more about your own and take action where your heart leads you. " The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's The Prize and Dana Goldstein's The Teacher Wars, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But The Knowledge Gap isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention. A Companion to the Philosophy of Education is a comprehensive guide to philosophical thinking about education. Offers a state-of-the-art account of current and controversial issues in education, including issues pertaining to multiculturalism, special education, sex education, and academic freedom. Written by an international team of leading experts, who are directly engaged with these profound and complex educational problems. Serves as an indispensable guide to the field of philosophy of education. It Has Been Rightly Said That Only A True Philosopher May Give A Practical Shape To Education. Philosophy And Education Go Hand In Hand. Education Depends On Philosophy For Its Guidance While Philosophy Depends On Education For Its Own Formulation. Teaching Methods Are Very Much Concerned With The Philosophy Of Education The Teacher Holds. The Philosophical Systems Of Education Govern The Teacher S Attitude To The Method Of Teaching. With A View To Comprehend The Close Relationship Of Philosophy And Education And Their Great

Significance In The Modern Times, The Present Book Philosophy Of Education Has Been Written. The Book Aims At Presenting The Western Isms Of Philosophy As Well As Indian Philosophy Of Education Beginning From The Vedas To The Contemporary Philosophies. It Elucidates The Philosophical Issues And Attempts To Draw The Philosophical Implications Of Every Isms . Invaluable Viewpoints On Education Of Eminent Educators Like Rousseau, Russell, Swami Dayanand, Annie Besant, M.K. Gandhi, Rabindranath Tagore And Many Others, And The Influence Of Their Philosophies Have Been Studied In Depth. It Acquaints The Readers With The Varied Aims And Ideals Of Education, Methods And Principles Of Teaching, Role And Influence Of Teachers As Propounded By The Great Philosophers. Written In A Simple Language And Lucid Style, The Book Is Expected To Serve As An Ideal Textbook On The Subject. It Will Prove Indispensable For The Students And Teachers Of Education. Question Bank At The End Of The Book Is An Added Advantage Provided To The Students Which Would Prove Helpful In Preparation For Examination. Even The General Readers Will Find This Book Worth-Reading. This book evaluates the increasingly wide variety of intellectual resources for research methods and methodologies and investigates what constitutes good educational research. Written by a distinguished international group of philosophers of education Questions what sorts of research can usefully inform policy and practice, and what inferences can be drawn from different kinds of research Demonstrates the critical engagement of philosophers of education with the wider educational research community and illustrates the benefits that can accrue from such engagement This introductory text, now in its fourth edition, is a classic in its field. It shows, first and foremost, the importance of philosophy in educational debate and as a background to any practical activity such as teaching. What is involved in the idea of educating a person or the idea of educational success? What are the criteria for establishing the optimum balance between formal and informal teaching techniques? How trustworthy is educational research? In addition to these questions, which strike to the heart of the rationale for the educative process as a whole, the authors explore such concepts as culture, creativity, autonomy, indoctrination, needs, interests and learning by discovery. In this new updated edition, the authors draw on the latest research in genetics to argue that education is uniquely human and is essentially what develops us as humans. Resisting modern tendencies to equate knowledge with opinion, and value judgements with taste, this book leads the reader into the business of philosophising and champions the cause of reason in education. Today's pluralist and multicultural society raises questions about how to teach religiously and ethnically diverse students in Catholic schools. A Catholic Philosophy of Education addresses these challenges by examining the documents from the Roman Congregation for Catholic Education alongside the writings of Jacques Maritain and Bernard Lonergan. Mario D'Souza proposes a contemporary formulation for a Catholic philosophy of education in which the ideals of Catholicism form the basis for the mission of the Catholic school. Drawing on the Church's educational documents, and informed by Maritain and Lonergan, D'Souza explains how the unifying anthropology of Catholic education enables Catholic schools to serve amidst diversity by avoiding the extremes of religious exclusivism and fundamentalism, on the one hand, and relativism and individualism, on the other. He explores the aims of Catholic schools in relation to students, teachers, and society, and the relationship between goodness, discipline, and knowledge. He argues that students must be educated for personal and communal freedom and authenticity, and to strive for the common good, suggesting how a Catholic philosophy of education can provide the framework for such personal and communal transformation. Essential reading for new and experienced Catholic educators, A Catholic Philosophy of Education demonstrates that Maritain and Lonergan have much to offer in service of an education that is liberating, instructive, illuminating, and integrative. There are many students who find philosophy of education difficult, because they have never received teaching in the basic essentials of general philosophy. This book begins by asking the basic question 'what is philosophy?' and examines a number of possible answers. Step by step the reader is introduced to the modern techniques of linguistic and concept analysis. Whenever a technical term is used it is explained and illustrated by reference to familiar situations in everyday life. Never before published, this book features George Herbert Mead's illuminating lectures on the Philosophy of Education at the University of Chicago during the early 20th century. These lectures provide unique insight into Mead's educational thought and reveal how his early psychological writings on the social character of meaning and the social origin of reflective consciousness was central in the development of what Mead referred to as his social conception of education. The introduction to the book provides an overview of Mead's educational thought and places it against the wider social, intellectual, and historical background of modern educational concepts.
