Making the Grade Dec 17 2019 This book provides a guide for a long-overdue public dialogue about why and how we need to reinvent our nation's schools. How has the world changed for our children; what do all students need to know in light of these changes; how do we hold students and schools accountable for results; what do good schools look like; and what must leaders do to create more of these schools? These are some of the questions that drive this book. The answers emerging to these questions may surprise many. The most successful public schools of the 21st century look a lot more like our 19th century village schools than our current factory model of schooling. This book describes these "new village schools" that have been created in the last decade and suggests that they are a prototype for the schools of the future.

Masters of Illusion Jan 18 2020 Many legal theorists and judges agree on one major premise in the field of law and religion: that religion clause jurisprudence is in a state of disarray and has been for some time. In *Masters of Illusion*, Frank S. Ravitch provocatively contends that both hard originalism (a strict focus on the intent of the Framers) and neutrality are illusory in religion clause jurisprudence, the former because it cannot live up to its promise for either side in the debate and the latter because it is simply impossible in the religion clause context. Yet these two principles have been used in almost every Supreme Court decision addressing religion clause questions. Ravitch unpacks the various principles of religion clause interpretation, drawing on contemporary debates such as school prayer and displaying the Ten Commandments on courthouses, to demonstrate that the neutrality principle does not work in a pluralistic society. When defined by large, overarching principles of equality and liberty, neutrality fails to account for differences between groups and individuals. If, however, the Court drew on a variety of principles instead of a single notion of neutrality to decide whether or not laws facilitated or discouraged religious practices, the result could be a more equitable approach to religion clause cases.

NeoVouchers Aug 25 2020 While school vouchers have captured the headlines, a different policy has captured the students. Tuition tax credit laws are now entrenched in Arizona, Florida, Pennsylvania, Rhode Island, Iowa, and Georgia, and they affect far more students. Yet few people understand the nature of these policies or the political and legal issues surrounding them. This book provides a comprehensive analysis of the structure, legality, and policy implications of tuition tax credits, which have garnered only scant attention even while expanding to cover more students than the voucher policies they're designed to emulate. At a time when tax credit policies are becoming a major form of American school choice, this book offers insights into both the strengths and weakness of the approach.

Freedom of Religion Under Bills of Rights Nov 27 2020 "The Australian Constitution contains no guarantee of freedom of religion or freedom of conscience. Indeed, it contains very few provisions dealing with rights — in essence, it is a Constitution that confines itself mainly to prescribing a framework for federal government, setting out the various powers of government and limiting them as between federal and state governments and the three branches of government without attempting to define the rights of citizens except in minor respects. [...] Whether Australia should have a national bill of rights has been a controversial issue for quite some time. This is despite the fact that Australia has acceded to the ICCPR, as well as the First Optional Protocol to the ICCPR, thereby accepting an international obligation to bring Australian law into line with the ICCPR, an obligation that Australia has not discharged. Australia is the only country in the Western world without a national bill of rights.⁴ The chapters that follow in this book debate the situation in Australia and in various other Western jurisdictions.' From Foreword by The Hon Sir Anthony Mason AC KBE: Human Rights and Courts

Religious Charter Schools Nov 15 2019 This book explores the constitutionality of religion-based charter schools. The method of analysis uses hypothetical charter schools to answer legal questions. The answers are grounded in law using the latest precedent. The background material before examining charters sets forth both the legal and policy contexts of religious charters schools. The legal context includes a detailed analysis of the Establishment Clause of the U.S. Constitution focusing on the most recent Supreme Court cases on that topic. The policy analysis examines the normative and structural dimensions of charter schools, which are then compared with voucher programs. The historical, political and educational contexts of charter programs are also examined. The book concludes that charter schools present an opportunity for parents and communities to form charter schools that will accommodate their beliefs; however, the constitution does not allow them to form schools that endorse their beliefs.
