Praised in its original edition for its up-to-date, rigorous presentation of current debates and for the clarity of its presentation, Robert Stecker's new edition of *Aesthetics and the Philosophy of Art* preserves the major themes and conclusions of the original, while expanding its content, providing new features, and enhancing accessibility. Stecker introduces students to the history and evolution of aesthetics, and also makes an important distinction between aesthetics and philosophy of art. While aesthetics is the study of value, philosophy of art deals with a much wider array of questions including issues in metaphysics, epistemology, the philosophy of mind, as well value theory. Described as a 'remarkably unified introduction to many contemporary debates in aesthetics and the philosophy of art,' Stecker specializes in sympathetically laying bear the play of argument that emerges as competing views on a topic engage each other. This book does not simply present a controversy in its current state of play, but instead demonstrates a philosophical mind at work helping to advance the issue toward a solution. Providing an introduction to moral theory that explains and critically examines the theories of such classical moral philosophers as Aristotle, Aquinas, Kant, Bentham, Mill, and Ross, this book acquaints

students with the work of contemporary moral philosophers. All of the book's chapters have been revised in light of recent work in moral theory. The second edition includes a new chapter on ethical egoism, an extensively revised chapter on moral particularism, and expanded coverage of divine command theory, moral relativism, and consequentialism. Additionally, this edition discusses recent work by moral psychologists that is making an impact on moral theory. Excerpt from *The Metaphysical System of Hobbes: In Twelve Chapters From Elements of Philosophy Concerning Body; Together With Briefer Extracts From Human Nature and Leviathan* This condensation of the English version of Hobbes's book *Concerning Body* has been made, because the work is the completest summary of the metaphysical teaching of Hobbes and because there exists no inexpensive reprint or compendium of it. The ethical and social doctrines of Hobbes may be readily studied at first hand, by the aid of modern editions of the *Leviathan* or of volumes of selections from the writings of Hobbes; but for his strictly metaphysical teaching one must now have recourse to the volumes of the Molesworth edition. Teachers of modern philosophy who believe, with the writer, that the study of original texts is of incomparable value to the student must have been puzzled in their efforts to be just to the claims of materialism. Convenient expositions of idealism are readily found in the editions of Berkeley's *Principles and Dialogues*. But no historically important summary of materialistic doctrine has, so far, been accessible. This volume aims to supply the need and also to give an adequate impression of the *Elements of Philosophy Concerning Body*. To gain the latter end, chapters have been included from all four Parts of the work, and the headings of omitted chapters have been printed in full. With depth and quality, this introductory anthology offers a selection of readings that is both extensive and expansive; the readings span twenty-five centuries. They are organized topically into five parts: Religion and Belief, Moral and Political Philosophy, Metaphysics and Epistemology, Philosophy of Mind and Language, and Life and Death. The product of the collaboration of three highly respected scholars in their fields - Tamar Szabó Gendler, Susanna Siegel, and Steven M. Cahn - *The Elements of Philosophy* also includes introductions from the editors, explanatory footnotes, and a glossary. The new edition of this introductory text presents, in an accessible way, classical and contemporary readings on topics central to and representative of all

major periods of the Western philosophical tradition. The book presents 55 readings (23 of which are new to the fourth edition) on seven topics: epistemology, philosophy of religion, metaphysics, personal identity and immortality, free will and determinism, ethics, and political and social philosophy. Pedagogical features make these readings accessible and interesting to beginning students. All the introductions and biographical sketches have been revised for the fourth edition, as have the study questions and glossary. The explanatory footnotes and the stylistic modernization of texts are new to the fourth edition. '... an immensely well-informed and up-to-date discussion... Replete with controversial and original insights, it is sure to stimulate the interest of students and specialists alike.' *THE* This book provides an accessible lively introduction to the main problems and debates in contemporary philosophy of mind. Tim Crane proposes an original and unified theory of all the phenomena of mind, and, in the light of his theory, examines the central problems of the philosophy of mind: the mind-body problem, the problem of intentionality, the problem of consciousness, and the problem of perception. Socrates said that moral philosophy deals with 'no small matter, but how we ought to live'. Beginning with a minimum conception of what morality is, the author offers discussions of the most important ethical theories. He includes treatments of such topics as cultural relativism, ethical subjectivism, psychological egoism, and ethical egoism. This brief survey text contains a discussion of a number of representative metaphysical questions and some proposed resolutions to these questions. The author offers balanced arguments on debated topics and draws important connections between historical and contemporary work. It contains many concrete, interesting examples of abstract concepts--allowing students to more easily grasp the material. *Apocalypse in Astronism & Elements of Philosophy* is the one-hundred and twenty-eighth instalment in the Little Blue Book Series and comprises the seventh, eighth, and ninth discourses of the *Dodecadoxo*, the twelfth and final disquisition of the *Omnidoxy*, the founding text of Astronism. Within this publication, a multitude of topics are explored with significance to the beliefs of Astronism, namely the consideration of the concept of mercy in relation to Astronism as well as the understanding of meaningfulness applied to the context of Astronism. The Little Blue Book Series was created and first published by Cometan himself as a way to simplify and commercialise the immensity of the two million word length of the *Omnidoxy* into smaller, more bite-size publications. A successful series from its very first published entry, the Little Blue Book Series has gone on to become a symbol of Astronist commercial literature and a way for Cometan's words to reach readers of all ages and abilities who remain daunted by the beauty and yet the sheer extensiveness of the *Omnidoxy* as the longest religious text in history. Philosophy is the study of questions related to existence, knowledge, mind, values, reason and language. The discipline is broadly classified into four major branches, namely, ethics, epistemology, metaphysics and logic. Ethics deals with the moral values, good and bad conduct, and ideas of good and evil. Epistemology focuses on the nature and sources of knowledge like intuition and memory. Metaphysics studies the various features of reality such as time, existence and objects. The rules of inference are studied under the subject of logic. These rules help in the derivation of conclusions from true premises. The subject of philosophy makes use of numerous methods such as rational arguments, critical discussion, questioning and systematic presentation. This book attempts to understand the multiple branches that fall under the discipline of philosophy and how such concepts have practical applications. It aims to shed light on some of the unexplored aspects of philosophy. Coherent flow of topics, student-friendly language and extensive use of examples make this book an invaluable source of knowledge. A summary of basics for student and seminarian. Firmly established as the standard text for undergraduate courses in ethics, James Rachels and Stuart Rachels' *The Elements of Moral Philosophy* introduces readers to major moral concepts and theories through eloquent explanations and compelling, thought-provoking discussions. J.S. Mackenzie surveys Western philosophy from Socrates to the New Realists in an uncomplicated and approachable style. Originally published in 1917, this text serves as a useful introduction to philosophy and well-summarises the key theories of great philosophers throughout the centuries and their bearing on early twentieth-century thought. It is ideal for students of Philosophy, both for beginners and the more advanced. "The first philosophy of technology, constructing humans as technological and technology as an underpinning of all culture. Ernst Kapp's 1877 *Elements of a Philosophy of Technology* is nothing less than the emergence of early elements of a cybernetic paradigm. Kapp applies the theory of organ projection to various areas of the material world--the axe externalizes the arm, the telegraphic system the neural network--studying the human body and its relationship with the world that surrounds it." -- From the publisher. *Introduction to the Philosophy of Sport* begins with the history of sport, delves into both the metaphysics and ethics of sport, and also addresses dimensions of the social and political elements of sport. This book is a comprehensive introduction to the philosophy of sport with a straightforward layout that professors can plan and build their courses around. Social and political philosophy, unlike other fields and disciplines, involves conflict, disagreement, deliberation, and action. This text takes a new approach and understands philosophy not so much as a story of great

thinkers or as a collection of philosophical positions but as a series of debates and disagreements in which students must participate. Adopting what may be called an 'active learning' method, Richard Schmitt, who has long taught social and political philosophy in the Ivy Leagues as well at state colleges, presents a range of problems and debates which engage the core question of freedom. Too often, students are bewildered, and then bored, by highly abstract philosophical questions because they are unable to connect those abstract issues to their own life experiences. This text immediately connects issues and experiences, and provides integrated, on-going questions to spark dialogue, whether in class settings or in the reader's own mind, and to help students form strong arguments with good reasons for their positions. In the course of examining different current controversies, the book develops theories of democracy, equality, the state, property, autonomy, and the role of morality in politics, all of which are standard for courses in social and political philosophy. If you are an aspiring young philosopher or just curious about philosophy, this book will give you a jump-start. In about three hours' reading time you will become familiar with the most basic building blocks of philosophy and will become acquainted with twelve of the most influential philosophers in Western history. To make the information as memorable as possible, many of the terms are arranged in pairs so that you get two for the price of one and can quickly grasp how they are related. Other disciplines in the humanities use many of the same terms, so by mastering them you will also obtain tools for understanding historians, sociologists, psychologists, economists, and political scientists. Managing as a form of human action has an inherent link with philosophy, which is also concerned with choosing the right action and the best way to lead our lives. Management theory and philosophy can join forces in epistemology (the philosophy of knowledge), ethics, and cultural theory. The epistemology of management concerns the question of how management can improve its ability to create knowledge about managing companies and about using management theory in the task of managing. Management ethics investigates the question of what the right management actions are. The cultural theory of management examines how corporate culture can increase the cooperation within the firm and how the cultural surplus value of products and brand management can increase the firm's value creation in its products. This book introduces the readers to central approaches in this new field, which represents a synthesis of management and philosophical theory. John Russon's Human Experience draws on central concepts of contemporary European philosophy to develop a novel analysis of the human psyche. Beginning with a study of the nature of perception, embodiment, and memory, Russon investigates the formation of personality through family and social experience. He focuses on the importance of the feedback we receive from others regarding our fundamental worth as persons, and on the way this interpersonal process embeds meaning into our most basic bodily practices: eating, sleeping, sex, and so on. Russon concludes with an original interpretation of neurosis as the habits of bodily practice developed in family interactions that have become the foundation for developed interpersonal life, and proposes a theory of psychological therapy as the development of philosophical insight that responds to these neurotic compulsions. John Russon is Associate Professor of Philosophy at the University of Guelph. He is the author of The Self and Its Body in Hegel's Phenomenology of Spirit. He is also the coeditor (with John Sallis) of Retracing the Platonic Text and (with Michael Baur) Hegel and the Tradition: Essays in Honour of H. S. Harris. By exploring Mach's views on science as well as philosophy, this book attempts to wrest him free from his customary association with logical positivism and to reinterpret him on his own terms as a natural philosopher and naturalist about human knowledge. Physicists, psychologists, philosophers of science, historians of twentieth-century thought and

culture, and educators will find this volume a valuable help in interpreting Mach's ideas.
