Topics in Clinical
Pharmacology and
Therapeutics Aug 21 2022 Dr.
Maronde has performed a
major service in bringing
together a superb array of
scholars and clinicians to
discuss not only the basic
principles in therapeutics and
clinical pharmacology but also
the application of those
principles to a wide range of
clinical problems. Inclusion of
chapters on adverse drug
reactions, drug overdose,
nonmedical prescription drug

use, physician prescribing
patterns, and the
pharmaceutical industry makes
this a particularly valuable
book for clinicians. It is
increasingly important that
clinicians be well grounded in
the principles of
pharmacodynamics and
pharmacokinetics because
more and more of our patients
are aging and cannot be
treated as young or middle-
aged adults. Elderly patients
are liable to either drug
overdose or underdose if
traditional dosage formulas are
followed because of changes in
drug metabolism, drug
distribution within the body,
drug excretion, or changes in
receptor site sensitivity.

Because the elderly often present with multiple chronic diseases and require a variety of medications, they are more prone to medication errors, drug-drug interactions, and adverse drug reactions. The inclusion of three excellent chapters relating to drug-drug interactions, adverse drug reactions, and drug overdose is most welcome and is a valuable addition to this outstanding text on therapeutics and clinical pharmacology. Adverse drug reactions present a potentially serious problem for any patient for whom drugs are prescribed and particularly for those who must take multiple prescriptions.

The Biology and Management of Capricornis and Related Mountain

Antelopes Feb 15 2022 The Japanese serow (*Capricornis crispus*) has been protected by law since 1955 in Japan, because it was becoming rarer and approaching extinction. Thereafter, the serow population has increased gradually. The Japanese serow is thought to be a primitive relict species on the islands of

Japan, and the geographical range of the serow has retracted upwards into the mountain forests to avoid contact with humans. Little was therefore known about these animals. However, increasing losses of forest habitat due to exploitation of the mountain forests or expanding cultivation by local foresters have driven the Japanese serow back into the lowlands of Japan. Since then, complaints of damage to trees and other vegetation have accumulated against the serow. In some prefectures the shooting of Japanese serow was allowed in order to prevent damage to forests. The animals killed were taken for research by the Departments of the

Environment and by universities. was set up at the summit of Mt. Gozaisho, The Japan Serow Center Komonocho, Mie Prefecture, in 1962 and has made a great effort to breed the serow and its related species in captivity. In addition, the International Studbook of Capricorn is crispus in captivity was established in Japan, and the state of breeding of the Japanese serows is now reported annually. However, without detailed scientific research, it is impossible to conduct sensible protection, conservation or management of the serow in captivity or in the wild.

Mechanisms and Phylogeny of Mineralization in Biological Systems Oct 11 2021 Various kinds of mineralization have been found in many biological systems. Investigations made at a microscopical level using various sophisticated analytical methods and using principles developed in different fields have clarified their mechanisms very much. Sometimes, very similar phenomena have been found in the mineralized tissues of completely different biological systems. Compilation and comparative investigations of such findings obtained from the many specimens systematically collected contribute a great deal to an understanding of the

crucial mechanisms and significance of biomineralization which originated in very primitive organisms and remain in advanced ones. Previously, the functional significance of mineralized tissues was considered mainly from an anatomical point of view based upon their morphological and structural features. However, the recent advance of investigations has made it possible to interpret the functional significance of biomineralization not only from local and mechanical points of view, but also from a systemic and phylogenetic point of view. It is also well-known that biomineralization has contributed in various ways to

geological and oceanographical conditions of the environment in which the organisms were living. During this process, the mechanisms of biomineralization may have evolved to maintain harmony between organisms and their environments.

It will be published quarterly, thus each subspecialty will be reviewed biannually. Given the multiplicity of medical publications already available, why is a new series needed? Consider that the half-life of medical knowledge is

estimated to be around 5 years. Moreover, it can be as long as 8 years between the first description of a medical innovation in a peer-reviewed scientific journal and publication in a medical textbook. A series that narrows this time span between journal and textbook would provide a more rapid and efficient transfer of medical knowledge into clinical practice, and enhance care of our patients.

Hysteresis and Phase Transitions Oct 31 2020

Hysteresis is an exciting and mathematically challenging phenomenon that occurs in rather different situations: it can be a byproduct of fundamental physical mechanisms (such as phase transitions) or the consequence of a degradation or

imperfection (like the play in a mechanical system), or it is built deliberately into a system in order to monitor its behaviour, as in the case of the heat control via thermostats. The delicate interplay between memory effects and the occurrence of hysteresis loops has the effect that hysteresis is a genuinely nonlinear phenomenon which is usually non-smooth and thus not easy to treat mathematically. Hence it was only in the early seventies that the group of Russian scientists around M. A. Krasnoselskii initiated a systematic mathematical investigation of the phenomenon of hysteresis which culminated in the

fundamental monograph Krasnoselskii-Pokrovskii (1983). In the meantime, many mathematicians have contributed to the mathematical theory, and the important monographs of I. Mayergoyz (1991) and A. Visintin (1994a) have appeared. We came into contact with the notion of hysteresis around the year 1980.

Arctic Bf 109 and Bf 110 Aces Dec 01 2020 Once Nazi Germany had conquered Norway in 1940, just a handful of Gruppen flying the Bf 109 and Bf 110 fighters were able to shatter all opposition and dominate the air in the Arctic Circle. Yet as the dual threats

of the RAF and the Red Air Force grew, the Luftwaffe was forced to increase its fighter presence to full Geschwader strength with the formation of JG 5 Eismeer (Ice-sea) in early 1942. The struggle for the frozen skies of the arctic raged on until the end of the war as the embattled JG 5 produced some of the Eastern Front's leading aces, pilots of the calibre of Theodor Weissenberger, Heinrich Ehrler, Walter Schuck, Franz Dörr and Jakob Norz all achieving over 100 kills. Featuring first-hand accounts from the pilots, extensive research from a leading authority on the Luftwaffe, and illustrations of the aircraft in

unique winter camouflage, this book is a comprehensive guide to the Arctic Experten and the planes they flew.
