[Powerful Problem Solving](#) Mar 16 2022 How can we break the cycle of frustrated students who "drop out of math" because the procedures just don't make sense to them? Or who memorize the procedures for the test but don't really understand the mathematics? Max Ray-Riek and his colleagues at the Math Forum @ Drexel University say "problem solved," by offering their collective wisdom about how students become proficient problem solvers, through the lens of the CCSS for Mathematical Practices. They unpack the process of problem solving in fresh new ways and turn the Practices into activities that teachers can use to foster habits of mind required by the Common Core: communicating ideas and listening to the reflections of others estimating and reasoning to see the "big picture" of a problem organizing information to promote problem solving using modeling and representations to visualize abstract concepts reflecting on, revising, justifying, and extending the work. Powerful Problem Solving shows what's possible when students become active doers rather than passive consumers of mathematics. Max argues that the process of sense-making truly begins when we create questioning, curious classrooms full of students' own thoughts and ideas. By asking "What do you notice? What do you wonder?" we give students opportunities to see problems in big-picture ways, and discover multiple strategies for tackling a problem. Self-confidence, reflective skills, and engagement soar, and students discover that the goal is not to be "over and done," but to realize the many different ways to approach problems. Read a sample chapter.

Problem solving activities in post-editing and translation from scratch Feb 15 2022 Companies and organisations are increasingly using machine translation to improve efficiency and cost-effectiveness, and then edit the machine translated output to create a fluent text that adheres to given text conventions. This procedure is known as post-editing. Translation and post-editing can often be categorised as problem-solving activities. When the translation of a source text unit is not immediately obvious to the translator, or in other words, if there is a hurdle between the source item and the target item, the translation process can be considered problematic. Conversely, if there is no hurdle between the source and target texts, the translation process can be considered a task-solving activity and not a problem-solving activity. This study investigates whether machine translated output influences problem-solving effort in internet research, syntax, and other problem indicators and whether the effort can be linked to expertise. A total of 24 translators (twelve professionals and twelve semi-professionals) produced translations from scratch from English into German, and (monolingually) post-edited machine translation output for this study. The study is part of the CRITT TPR-DB database. The translation and (monolingual) post-editing sessions were recorded with an eye-tracker and a keylogging program. The participants were all given the same six texts (two texts per task). Different approaches were used to identify problematic translation units. First, internet research behaviour was considered as research is a distinct indicator of problematic translation units. Then, the focus was placed on syntactical structures in the MT output that do not adhere to the rules of the target language, as I assumed that they would cause problems in the (monolingual) post-editing tasks that would not occur in the translation from scratch task. Finally, problem indicators were identified via different parameters like Munit, which indicates how often the participants created and modified one translation unit, or the inefficiency (InEff) value of translation units, i.e. the number of produced and deleted tokens divided by the final length of the translation. Finally, the study highlights how these parameters can be used to identify problems in the translation process data using mere keylogging data.

ACTIVITIES TO ENHANCE SOCIAL, EMOTIONAL, AND PROBLEM-SOLVING SKILLS Apr 24 2020 Since the publication of the first edition in 1998, the authors have maintained a strong interest in positive psychology focusing on skills and methods for living effectively and happily. This updated and revised third edition provides descriptions of 90 engaging activities that can be used to teach valuable, social, emotional, and problem-solving skills. Some of the skills taught include identifying and expressing one's own emotions, identifying emotions in others, coping with stressors, making and keeping friends, setting goals, and solving real-life problems. The game and challenge aspects of the activities engage the trainee in the activity, while the instructional aspects of the book explain to the trainee how and when to apply a skill in everyday life. The book provides background information on the value of the skills taught by the activities, guidance on how to use the activities to maximum effect, and examples of how various types of trainees reacted to the activities. The skills taught range from the elementary, such as identifying emotions others are experiencing, to the sophisticated, such as providing leadership and solving real-life problems. Counselors, psychotherapists, teachers, and parents can use the activities to facilitate the development of important skills in maladjusted or well-adjusted individuals. Rhea Zakich, creator of the Ungame, wrote in the foreword: "I'm struck by the breadth and practicality of the subjects covered and I appreciate the suggested discussion topics at the end of each activity. . . . The fact that many of these exercises involve the entire person, body, mind and emotions, will help the participants retain what they learn and be more apt to transfer their learning to everyday life."
