OPTIONS TRADING STRATEGIES

Aug 19 2022 Do you want to become a successful options trader? If yes, then... Keep Reading! An option is a contract that gives you the right to buy or sell shares of stock at a fixed price. A single options contract is for 100 shares of stock. So, one option contract might give you the ability to sell a hundred shares of a stock at \$100 a share, or it might give you the ability

to buy 100 shares of stock at \$100 a share. The price that is specified in the contract is fixed, and so it doesn't necessarily matter if the market price of the stock is fluctuating as far as that goes. That is, even if the stock price were to rise to say \$200 a share, or even \$300 a share if you have an option that specifies that you have the right to buy 100 shares at \$100 a share, that contract must be honored if you choose to exercise it. Of course, you don't have to exercise it, and that is why they are called "options." It is optional for the buyer to exercise their rights under the contract and buy or sell the

shares. This book covers the following topics Strategy for selling covered calls The pros and cons of options trading Make always an assessment of your personal financial situation before investing The four components of an option contract How the price of an option is affected Stock option trading concept: what they are and how they work ...and Much More! If you are careless, selling options could get you into trouble. However, as we will see using sound strategies, you can do it at relatively low risk. Ready to get started? If yes, then keep reading. Day trading is a form of trading where trades are opened and closed on the same day, enabling the trader to capitalize on marginal gains earned through the

day to day volatility of the market. When you are a day trader, your goal is to identify what stocks are likely to shift into favor that day so that you can conduct your trades accordingly. Generally, day traders will buy their stocks in the morning and hold onto those stocks until later in the day when the marginal gains have accumulated enough to earn a significant profit. Then, they will close the trade by selling the stocks before the end of the day so that they are not left holding any stocks after the market closes. Utilizing the day trading strategy means that your goal is to always be free of stocks in the

evening to ensure that you are not exposing yourself to the risk of overnight price changes. As with any form of trading, you want to minimize your risk by never staying in the market longer than you intended to, as doing so could expose you to unforeseen changes that can lead to significant losses. This book covers: Risk and Account Management How to Find Stocks for Trades Tools and Platforms Transactions Borrowings and Fiscal Costs Advanced Options Trading Strategies ...And so much more!
