This volume constitutes the refereed proceedings of the 7th International Conference on Smart Card Research and Advanced Applications, CARDIS 2006, held in Tarragona, Spain, in April 2006. The 25 revised full papers presented were carefully reviewed and updated for inclusion in this book. The papers are organized in topical sections on smart card applications, side channel attacks, smart card networking, cryptographic protocols, RFID security, and formal methods. In his mid-twenties, Dave Asprey was a successful Silicon Valley multimillionaire. He also weighed 300 pounds, despite the fact that he was doing what doctors recommended: eating 1,800 calories a day and working out 90 minutes a day, six times a week. When his excess fat started causing brain fog and food cravings sapped his energy and willpower, Asprey turned to the same hacking techniques that made his fortune to "hack" his own biology, investing more than \$300,000 and 15 years to uncover what was hindering his energy, performance, appearance, and happiness. From private brain EEG facilities to remote monasteries in Tibet, through radioactive brain scans, blood chemistry work, nervous system testing, and more, he explored traditional and alternative technologies to reach his physical and mental prime. The result? The Bulletproof Diet, an anti-inflammatory program for hunger-free, rapid weight loss and peak performance. The Bulletproof Diet will challenge—and change—the way you think about weight loss and wellness. You will skip breakfast, stop counting calories, eat high levels of healthy saturated fat, work out and sleep less, and add smart supplements. In doing so, you'll gain energy, build lean muscle, and watch the pounds melt off. By ditching traditional "diet" thinking, Asprey went from being overweight and sick in his twenties to maintaining a 100-pound weight loss, increasing his IQ, and feeling better than ever in his forties. The Bulletproof Diet is your blueprint to a better life. Build Dynamic Websites with PHP and MySQL—and Extend Those Sites with Web Services PHP and MySQL are great tools for building database-driven websites. There's nothing new about that. What is new is the environment in which your site operates—a world rich (and growing richer) in web services that can add value and functionality in many different ways. Creating Interactive Web Sites with PHP and Web Services walks you through every step of a major web project—a content-management system—teaching you both the basic techniques and little-known tricks you need to build successful web sites. And you can use those skills to develop dynamic applications that will meet your special requirements. Here's some of what you'll find covered inside: Adding, deleting, and displaying data with a custom content-management system Building a template system with PHP Interacting with web services using PHP and MySQL Creating and managing a user system and a shopping cart Processing credit card payments using merchant accounts and third-party payment solutions Tracking site statistics using PHP and MySQL Enhancing your site with third-party scripts Tons of examples, complete with explanations and supported by online source code, will speed your progress, whether you're a true beginner or already have PHP experience. This book is platform-agnostic, so it doesn't matter if you're deploying your site on Linux or Windows. You also get PHP and MySQL references, so you can quickly resolve questions about syntax and similar issues. Yahoo! is the third most active shopping site on the Internet and this hands-on guide makes it easy for anyone to start selling on Yahoo! in no time. 'Oh what fun we had . . . Back in the days before 'market research'. We just made it all up. I can't believe people trusted us with their money. But then everyone started second-guessing themselves and arse-covering became a science.' --Dick Frizzell Back in the 1890s, being an ad man in New Zealand was a simple case of placing an ad in the paper on behalf of a client. By the 1980s, it was a golden ticket to an exclusive club of fast cars, big bucks and bad behaviour. Sell! takes you on a wild ride through the history of New Zealand advertising and its larger-than-life personalities - from selling the suburban fantasy to power games, overnight acquisitions, lunatic capers and the iconic Kiwi ads that reached giddy heights on the world stage. Legends of the local ad scene recall the glory days of big budgets and bigger egos, and tell the stories behind New Zealand's best-loved campaigns, including the Fernleaf family, Spot the dog and the infamous Bugger ad. A tale of creativity and ingenuity as much as it is of indulgence, Sell! will inspire anyone who's ever wanted to carve their own destiny in the face of the disapproving establishment. Some people might get an advertisement about online shopping sales with their credit card statements but they are camouflaged to look like normal ads. There is always a telephone number provided so that people can phone in their order, but if they want to look at the product up close and at every angle, the advertisement will probably have a web address printed on it that will list these online shopping sales that are being offered. No Spam. No Cold Calls. is a rallying cry for a new generation of sales and marketing leaders who are ready to ditch the traditional strategies, tactics, and technologies that are no longer working to deliver breakthrough results. Every organization wants to predictably grow revenue. The challenge facing sellers and marketers today is that B2B buyers have taken control of the buying journey, making it nearly impossible for business leaders to accurately predict anything, especially revenue growth. Prospects are being bombarded from all sides with forms, emails, and annoying phone calls as they try to research our solutions. So what do they do? They protect themselves by researching anonymously and not revealing themselves to us until their decision is made. That means that as sellers and marketers, we've lost our opportunity to influence the buying journey—that is, if we're still clinging to the traditional lead-based tools and strategies that we're used to. It's time for a new paradigm. Pioneering CMO Latané Conant delivers a step-by-step guide that will transform the way you think about marketing and selling in the modern age. Often challenging but never dull, No Forms. No Spam. No Cold Calls. delivers uncomfortable truths about the status quo—starting with Latané's first breakthrough that our old-school tactics not only treat our future customers like dirt, they also encourage the anonymous buying we're trying to combat. This book challenges sales and marketing leaders to engage customers the right way if you want to achieve predictable revenue growth. Latané lays out exactly how to enable your sales and marketing teams to take pride in the customer experience and finally align on how to put your prospects at the center of everything you do. In doing that, you'll learn to uncover customer demand, prioritize which accounts to work, engage the entire customer buying team, and measure real success. With this customer-first approach, you'll be able to confidently take down the forms, stop sending bulk emails, and quit making cold calls—and achieve breakthrough results. NEW YORK TIMES BESTSELLER “Uncontrolled Spread is everything you’d hope: a smart and insightful account of what happened and, currently, the best guide to what needs to be done to avoid a future pandemic.” —Wall Street Journal “Informative and well paced.”—The Guardian “An intense ride through the pandemic with chilling details of what really happened. It is also sprinkled with notes of true wisdom that may help all of us better prepare for the future.”—Sanjay Gupta, MD, chief medical correspondent, CNN physician and former FDA commissioner Scott Gottlieb asks: Has America’s COVID-19 catastrophe taught us anything? In Uncontrolled Spread, he shows how the coronavirus and its variants were able to trounce America’s pandemic preparations, and he outlines the steps that must be taken to protect against the next outbreak. As the pandemic unfolded, Gottlieb was in regular contact with all the key players in Congress, the Trump administration, and the drug and diagnostic industries. He provides an inside account of how level after level of American government crumbled as the COVID-19 crisis advanced. A system-wide failure across government institutions left the nation blind to the threat, and unable to mount an effective response. We’d prepared for the wrong virus. We failed to identify the contagion early enough and became overly reliant on costly and sometimes divisive tactics that couldn’t fully slow the spread. We never considered asymptomatic transmission and we assumed people would follow public health guidance. Key bureaucracies like the CDC were hidebound and outmatched. Weak political leadership aggravated these woes. We didn’t view a public health disaster as a threat to our national security. Many of the woes sprung from the CDC, which has very little real-time reporting capability to inform us of Covid’s twists and turns or assess our defenses. The agency lacked an operational capacity and mindset to mobilize the kind of national response that was needed. To guard against future pandemic risks, we must remake the CDC and properly equip it to better confront crises. We must also get our intelligence services more engaged in the global public health mission, to gather information and uncover emerging risks before they

hit our shores so we can head them off. For this role, our clandestine agencies have tools and capabilities that the CDC lacks. Uncontrolled Spread argues we must fix our systems and prepare for a deadlier coronavirus variant, a flu pandemic, or whatever else nature -- or those wishing us harm -- may threaten us with. Gottlieb outlines policies and investments that are essential to prepare the United States and the world for future threats.
