**Force of Nature** Jun 02 2021 Joe Pickett's friend's past comes back to haunt everyone he cares about in this "violent, bloody, and quite satisfying thriller"\* from #1 New York Times bestselling author C. J. Box. In 1995, Nate Romanowski was in a Special Forces unit abroad when his commander, John Nemecek, did something terrible. Now the high-ranking government official and cold-blooded sociopath is determined to eliminate anyone who knows about it—like Nate, who's hidden himself away in Wyoming's Bighorn Mountains. And he knows exactly how Nemecek will do it—by targeting Nate's friends to draw him out. That includes his friend, game warden Joe Pickett, and Pickett's entire family. The only way to fight back is outside the law. Nate knows he can do it, but he isn't sure about his straight-arrow friend. And all their lives could depend on it. **The Disappeared** May 13 2022 Wyoming game warden Joe Pickett has two lethal cases to contend with in this electrifying #1 New York Times bestseller from C. J. Box. Wyoming's new governor isn't sure what to make of Joe Pickett, but he has a job for him that is extremely delicate. A prominent female British executive never came home from the high-end guest ranch she was visiting, and the British Embassy is pressing hard. Pickett knows that happens sometimes--these ranches are stocked with handsome young cowboys, and "ranch romances" aren't uncommon. But no sign of her months after she vanished? That suggests something else. At the same time, his friend Nate Romanowski has asked Joe to intervene with the feds on behalf of falconers who can no longer hunt with eagles even though their permits are in order. Who is blocking the falconers and why? The more he investigates both cases, the more someone wants him to go away. Is it because of the missing woman or because he's become Nate's advocate? Or are they somehow connected? The answers, when they come, will be even worse than he'd imagined.

**Electrochemistry** Jul 03 2021 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued.

*Molecular Electrochemistry of Inorganic, Bioinorganic and Organometallic Compounds* Oct 14 2019 The use of electrochemical techniques by chemists, particularly those who regard themselves as "inorganic" coordination chemists, has undergone a very rapid growth in the last 15-20 years. The techniques, as classically applied to inorganic species, had their origins in analytical chemistry, and the methodology had assumed, until the mid 60s, more importance than the chemistry. However, the growth of interest in coordination compounds (including organometallic complexes) having unusually rich of electron-transfer in bio-inorganic redox properties, and in the understanding species, has propelled electro-chemistry into the foreground of potentially readily available techniques for application to a very wide range of problems of interest to those chemists. This growth has been fuelled additionally by the availability of relatively cheap equipment of growing sophistication and by an increase in the "inorganic" chemists' general knowledge of physical electrochemistry. In particular, with increasing availability and sophistication of equipment, kinetic problems are now being addressed, and the range of electrode types and configuration and solvents has been greatly expanded. Furthermore, the rapid expansion of interest in biological problems has opened new avenues in functionalisation of electrodes, in the development of sensory devices and, in a sense, a return to the analytical base of the science, using novel and multi-disciplinary techniques drawing on synthesis chemistry of and electronic micro-engineering. The drive towards increasing use microcomputer-controlled data analysis and the development of microelectrodes has opened exciting new avenues for the exploration of chemical reactions involving electron-transfer processes.

**Breaking Point** Oct 18 2022 Wyoming game warden Joe Pickett's hunt for a fugitive reveals a conspiracy in this taut thriller in the #1 New York Times bestselling series. Joe Pickett always liked Butch Roberson—a hardworking local business-owner whose daughter is friends with his own. Little does he know that when Butch says he is heading into the mountains to scout elk, he is actually going on the run. Two EPA employees have been murdered, and all signs point to Butch as the killer. Soon, Joe hears of the land Butch and his wife had bought to retire on—until they are told the EPA declared it a wetland—and the penalties they charged Butch until the family was torn apart by debt. Finally, it seems, the man just cracked. It's an awful story. But is it the whole story? The more Joe investigates, the more he begins to wonder—and the more he finds himself in the middle of a war in which he must choose sides.

**Metal-Ligand Co-operativity** Apr 19 2020 This book provides researchers in the fields of organic chemistry, organometallic chemistry and homogeneous catalysis with an overview of significant recent developments in the area of metal-ligand cooperativity, with a focus on pincer architectures. The various contributions highlight the widespread impact of M-L co-operativity phenomena on modern organometallic chemistry and catalyst development. The development of efficient and selective catalytic transformations relies on the understanding and fine control of the various elementary reactions that constitutes a catalytic cycle. Co-operative ligands, which actively participate in bond making and bond breaking together to the metal they support, open up new avenues in this area. In particular, buttressing a weak or reactive metal-ligand bond by flanking coordinating arms in a pincer ligand design is proving a versatile strategy to access robust metal complexes that exhibit unusual and selective reactivity patterns.
