Everything you need to completely restore your 1947-1955 first series Chevy pickup to better-than-new condition is shown in complete detail! The Advance Design era (1947-1955) was historic for Chevrolet, topping all the production numbers every year they were in production. And for good reason. The post-World War II economy demanded a tough and well-engineered solution for this growing economy. Selling more than 2.5 million units during this era, Chevrolet quickly surpassed and controlled the light-truck market with style, utility, and logical engineering. This era has been overlooked for long enough, and Deve Krehbiel, a well-known restoration expert from DevesTechNet.com who specializes in these trucks, puts his 40 years of experience restoring nothing but Advance Design trucks into an extensive and complete single volume. With more than 500 photos and detailed instruction for every aspect of a proper restoration, this book will be the restorer's best friend. Deve's companion book, Chevrolet Inline 6 Engine: 1929-1962 (SA455), explains in full detail the engine aspects of your project. The Advance Design Chevy pickup is one of the most popular and highly prized vehicles at any venue. The author's hope is that this book will give you the confidence and the knowledge to put your old Chevy truck back on the road in style. There is just nothing more interesting and more inviting than an old Chevy truck! Truly an indispensable tool and reference source for both the novice and advanced bicycle mechanic. Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal. In nine eventful years - 1957 to 1965 - the six-cylinder-engined Austin Healey evolved into a formidable and increasingly specialised rally car. By any standards, it was the first of the "homologation specials" - a type made progressively stronger, faster, more versatile, and more suitable for the world's toughest International rallies. Though the motorsport foundations had been laid by the Healey Motor Co. Ltd, the work needed to turn these cars into rock-solid 210bhp projectiles was almost all completed by the world-famous "works" BMC Competitions Department at Abingdon. It was because of their vast experience that the "Big Healeys" as they were always affectionately known - became fast and tough, nimble yet durable, so that they were capable of winning major events wherever traction could be assured. Not only did the "works" Austin Healeys win some of the world's most famous events - including Liege-Sofia-Liege, Spa-Sofia-Liege and the French and Austrian Alpine rallies, but they were also supremely fast on events like the Tulip, and came so close, so often, to winning their home event, the British RAC Rally, which traditionally ended the season. Not only did these cars turn their drivers - Pat Moss, Donald Morley, Rauno Aaltonen, Timo Makinen and Paddy Hopkirk among them - into heroes, but individual cars seemed to take on a character and reputation of their own. This book lists each and every success, each and every notable car, and traces exactly how the machinery developed, and improved, from one season to the next. Over time, the "works" cars not only adopted aluminium cylinder heads and body panels, much-modified chassis, transmission and exhaust systems, but they also became supremely strong and could withstand a true battering on the world's toughest events. This book relates how the cars were improved by the engineers, how the drivers came to love their heavy and sometimes self-willed steeds, and how the management team got the most out of everything - machinery, personnel, drivers, and regulations. . Heavily illustrated and packed with technical detail this book will make a welcome addition to any motorsport fans library.
